Crazy Gran Gary Botting,2015-12-10 Amy s Uncle Al and her mother Ariel both seem to have insider knowledge that something terrible is going to happen in Manhattan on September 11 2001 Thousands heeded Ariel s warning in The Chrislamic Messenger to flee New York City But how did they know The military believes Amy s father is somehow behind 9 11 even though he is supposedly dead and buried As a weapons technologist he was custodian of two Mark 53 nuclear bombs that were jettisoned by a failing B 52 over Champlain Lake at the same time he went missing in 1978 Now years later he seems to have come back from the dead Only Amy can stop her uncle from executing her father s plan to detonate one of the massive bombs inside a uranium mine in the Adirondacks causing a cataclysmic chain reaction that would create a sixth Great Lake and precipitate evacuation of the Eastern seaboard Uncle Al is intent on stopping Amy from alerting authorities by supplying her Chrislamic mother with evidence that although Amy swears she is a virgin she and her cousin Ron have been indulging in fornication According to Sharia law and Deuteronomy 13 Amy must be stoned to death As Uncle Al prepares to detonate the dirtiest bomb in history Ron attempts to stop Amy s stoning before New York State blows sky high

Aviation Automation Charles E. Billings,2018-01-29 The advent of very compact very powerful digital computers has made it possible to automate a great many processes that formerly required large complex machinery Digital computers have made possible revolutionary changes in industry commerce and transportation This book an expansion and

revision of the author's earlier technical papers on this subject describes the development of automation in aircraft and in the aviation system its likely evolution in the future and the effects that these technologies have had and will have on the human operators and managers of the system. It suggests concepts that may be able to enhance human machine relationships in future systems. The author focuses on the ability of human operators to work cooperatively with the constellation of machines they command and control because it is the interactions among these system elements that result in the system's success or failure whether in aviation or elsewhere. Aviation automation has provided great social and technological benefits but these benefits have not come without cost. In recent years new problems in aircraft have emerged due to failures in the human machine relationship. These incidents and accidents have motivated this inquiry into aviation automation. Similar problems in the air traffic management system are predicted as it becomes more fully automated. In particular incidents and accidents have occurred which suggest that the principle problems with today's aviation automation are associated with its complexity coupling autonomy and opacity. These problems are not unique to aviation they exist in other highly dynamic domains as well. The author suggests that a different approach to automation called human centered automation offers potential benefits for system performance by enabling a more cooperative human machine relationship in the control and management of aircraft and air traffic.
