The Neural Crest and Neural Crest Cells in Vertebrate Development and Evolution Brian K. Hall, 2008-12-28 A presentation of all aspects of neural crest cell origins embryological and evolutionary development and evolution neural crest cell behavior migration and anomalies neurocristopathies and birth defects that arise from defective neural crest development The treatment of development will include discussions of cellular molecular and genetic aspects of the differentiation and morphogenesis of neural crest cells and structures derived from neural crest cells The origins of the neural crest in embryology will be discussed using the recent information on the molecular basis of the specification of the neural crest Also presented are the advances in our understanding of the evolution of jaws from studies on lampreys and of the neural crest from studies on ascidians and amphioxus

The Notochord P. Eckhard Witten, Brian K. Hall, 2022-05-09 Although it is the defining organ of the Chordata the notochord and its cells are one of the least understood vertebrate organs This may be because large parts of the notochord are often replaced with cartilaginous or bony vertebral bodies The presence of cartilage in the notochord raises questions about the evolutionary relationships between notochord cells and cartilage cells This book integrates classical analytical studies with recent palaeontological experimental and molecular studies in both developmental and evolutionary contexts For example although the early signaling function of the notochord is conserved across the vertebrates many will be surprised to find that the role of the notochord in vertebral body development in tetrapods is not the blueprint for all vertebrates Recent studies on zebrafish and medaka embryos have uncovered the molecular mechanisms of a somite independent notochord driven segmentation process that establishes vertebral centra and intervertebral spaces As this process is not restricted to teleosts the authors have written a general discussion about the role of the notochord in vertebral formation Modularity and segmentation of the vertebral column are related topics Further overarching themes are the structure function and fate of the notochord in adult vertebrates and notochord cartilage relationships Key Features The first book devoted to notochord development function and evolution Includes and integrates information on the notochord from studies going back 169 years Integrates developmental molecular functional experimental and palaeontological studies Documents the fate of the notochord across the vertebrates Extensively illustrated with classical and new images Related Titles Bard J Evolution The Origins and Mechanisms of Diversity ISBN 978 0 3673 5701 6 Leys S and Hejnol A Origin and Evolution of Metazoan Cell Types ISBN 978 1 1380 3269 9

Evolving Neural Crest Cells Brian Frank Eames, Daniel Meulemans Medeiros, Igor Adameyko, 2020-07-28 Vertebrates possess lineage specific characteristics These include paired anterior sense organs and a robust modular head skeleton built of cellular cartilage and bone All of these structures are

derived at least partly from an embryonic tissue unique vertebrates the neural crest The evolutionary history of the neural crest and neural crest cells has been difficult to reconstruct This volume will use a comparative approach to survey the development of the neural crest in vertebrates and neural crest like cells across the metazoa This information will be used to reveal neural crest evolution and identify the genomic genetic and gene regulatory changes that drove them Key selling features Summarizes the data regarding neural crest cells and neural crest derivatives Uses a broad based comparative approach Suggests hypothesis that the origin of neural crest cells involved the novel co activation of ancient metazoan gene programs in neural border cells Illustrates how the emergences of neural crest made possible the diversification of vertebrate heads

Neurosurgical Aspects of Craniosynostosis Federico Di Rocco, John Kestle, 2025-01-02 The aim of this book is to cover the domain of craniofacial surgery focusing on neurological and neurosurgical issues It will offer neurosurgeons and allied specialists a practical way to manage these complex and common malformations in a timely and appropriate way At the same time they will be provided the knowledge necessary to understand the functional aspects of these diseases their anatomical and dynamic impact on the underlying cerebral and vascular structures as well as the cerebrospinal fluid pathways to overcome the limits of the mere morphological and esthetical correction Written by experts in the field the book will represent a reference resource not only for pediatric neurosurgeons and plastic and reconstructive maxillofacial surgeons but also for all neurosurgeons residents and fellows working in this area

Fins into Limbs Brian K. Hall, 2008-09-15 Long ago fish fins evolved into the limbs of land vertebrates and tetrapods During this transition some elements of the fin were carried over while new features developed Lizard limbs bird wings and human arms and legs are therefore all evolutionary modifications of the original tetrapod limb A comprehensive look at the current state of research on fin and limb evolution and development this volume addresses a wide range of subjects including growth structure maintenance function and regeneration Divided into sections on evolution development and transformations the book begins with a historical introduction to the study of fins and limbs and goes on to consider the evolution of limbs into wings as well as adaptations associated with specialized modes of life such as digging and burrowing Fins into Limbs also discusses occasions when evolution appears to have been reversed in whales for example whose front limbs became flippers when they reverted to the water as well as situations in which limbs are lost such as in snakes With contributions from world renowned researchers Fins into Limbs will be a font for further investigations in the changing field of evolutionary developmental biology

Amphibian Biology: Osteology Harold Heatwole, 1994 Study of the osteology of extant forms primarily morphological in focus but with some chapters stressing development functionality or phylogeny Topics include a comparison of dermal skulls of recent amphibians with those of their palaeozoic ancestors whole bones of the 3 orders of modern amphibians salamanders caecilians anurans
