Signal Processing in Radar Systems Vyacheslav Tuzlukov, 2017-12-19 An essential task in radar systems is to find an appropriate solution to the problems related to robust signal processing and the definition of signal parameters Signal Processing in Radar Systems addresses robust signal processing problems in complex radar systems and digital signal processing subsystems It also tackles the important issue of defining signal parameters The book presents problems related to traditional methods of synthesis and analysis of the main digital signal processing operations It also examines problems related to modern methods of robust signal processing in noise with a focus on the generalized approach to signal processing in noise under coherent filtering In addition the book puts forth a new problem statement and new methods to solve problems of adaptation and control by functioning processes Taking a systems approach to designing complex radar systems it offers readers guidance in solving optimization problems Organized into three parts the book first discusses the main design principles of the modern robust digital signal processing algorithms used in complex radar systems The second part covers the main principles of computer system design for these algorithms and provides real world examples of systems The

third part deals with experimental measurements of the main statistical parameters of stochastic processes It also defines their estimations for robust signal processing in complex radar systems Written by an internationally recognized professor and expert in signal processing this book summarizes investigations carried out over the past 30 years It supplies practitioners researchers and students with general principles for designing the robust digital signal processing algorithms employed by complex radar systems

Building High Integrity Applications with SPARK John W. McCormick, Peter C. Chapin, 2015-08-31 Software is pervasive in our lives We are accustomed to dealing with the failures of much of that software restarting an application is a very familiar solution Such solutions are unacceptable when the software controls our cars airplanes and medical devices or manages our private information These applications must run without error SPARK provides a means based on mathematical proof to guarantee that a program has no errors SPARK is a formally defined programming language and a set of verification tools specifically designed to support the development of software used in high integrity applications Using SPARK developers can formally verify properties of their code such as information flow freedom from runtime errors functional correctness security properties and safety properties Written by two SPARK experts this is the first introduction to the just released 2014 version It will help students and developers alike master the basic concepts for building systems with SPARK
