Le Corbusier, the Dishonest Architect Malcolm Millais,2018-01-23 This is not a book for architects but for all those that have suffered consciously and unconsciously from modern architecture and have wondered how it came about This was largely due to one man an architect called Le Corbusier For some he was a genius but the truth is he was a sham a fake a charlatan whose only gift was for self publicity He was the most influential architect of the second half of the twentieth century his influence overwhelmed the architectural profession on a global scale who swallowed his publicity whole and still hold him in awe For the rest of the world the mere mortals his influence was disastrous as traditional buildings were destroyed and replaced by featureless boxes of varying sizes imposing a dreariness hitherto unimagined As usual it was the poor who suffered most as they were herded into tower blocks These were often grouped into estates that ringed many towns and cities which then degenerated into high rise slums with all the well known attendant social problems This book exposes the myths that surround Le Corbusier detailing the endless failures of his proposals and his projects These were due to his profound dishonesty both as a person and as an architect His legacy was an architectural profession that believed and still believe they were designing buildings based on logic functionality and honesty whereas they were doing the opposite

The Urban Design Reader Michael Larice,Elizabeth Macdonald,2013-05-07 The second edition of The Urban Design Reader

draws together the very best of classic and contemporary writings to illuminate and expand the theory and practice of urban design. Nearly 50 generous selections include seminal contributions from Howard Le Corbusier, Lynch and Jacobs to more recent writings by Waldheim, Koolhaas and Sorkin. Following the widespread success of the first edition of *The Urban Design Reader*, this updated edition continues to provide the most important historical material of the urban design field but also introduces new topics and selections that address the myriad challenges facing designers today. The six-part structure of the second edition guides the reader through the history, theory and practice of urban design. The reader is initially introduced to those classic writings that provide the historical precedents for city making into the twentieth century. Part Two introduces the voices and ideas that were instrumental in establishing the foundations of the urban design field from the late 1950s up to the mid 1990s. These authors present a critical reading of the design professions and offer an alternative urban design agenda focused on vital and lively places. The authors in Part Three provide a range of urban design rationales and strategies for reinforcing local physical identity and the creation of memorable places. These selections are largely describing the outcomes of mid-century urban design and voicing concerns over the placeless quality of contemporary urbanism. The fourth part of the Reader explores key issues in urban design and development. Ideas about sprawl, density, community health, public space and everyday life are the primary focus here. Several new selections in this part of the book also highlight important international development trends in the Middle East and China. Part Five presents environmental challenges faced by the built environment professions today, including recent material on landscape urbanism, sustainability and urban resiliency. The final part examines professional practice and current debates in the field where urban designers work: what they do, their roles, their fields of knowledge and their educational development. The section concludes with several position pieces and debates on the future of urban design practice. This book provides an essential resource for students and practitioners of urban design, drawing together important but widely dispersed writings. Part and section introductions are provided to assist readers in understanding the context of the material, summary messages, impacts of the writing and how they fit into the larger picture of the urban design field.

In this book, Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information. They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an infinite flow of real books. Focusing on the intersection of information technology and architectural formulation, the authors create an evolving intellectual reflection on digital architecture and computer science.
