Attention And Brain Function Attention And Brain Function:

Attention and Brain Function Risto Näätänen, 1992 This book delineates cerebral mechanisms of attention in humans as they presently appear in the light of data obtained by using various modern brain research techniques While the book focuses primarily on the ways humans select environmental information the selectivity manifest in human thinking consciousness and motor behavior is also dealt with in the framework of an expanded attention concept By combining the most recent evidence from diverse fields of human brain research and relating these physiological data to achievements of modern cognitive psychology the author has developed an integrative view of human information processing This theory concentrates on mechanisms of attentional selection and on the automatic processing which provides a basis for the selective processes

Attention and Brain Function Risto Näätänen, 2018-09-03 Originally published in 1992 this book presents original psychophysiological research based on computerized techniques of recording and evaluating event related brain potentials The application of multichannel magnetoencephalography greatly contributes to exact localization of corresponding neuronal generators responsible for attention The book contains a bulk of information concerning data obtained by cognitive psychology in the area of study of attention These results are closely linked with neurophysiological investigation of attention

Attention and consciousness in different senses Naotsugu Tsuchiya, Jeroen J. Van Boxtel, 2013-06-03 Although often used in everyday speech and in the scholarly literature selective attention and consciousness lack clear undisputed definitions Partly because of this deficit there exists a lively debate on the relationship between the two Nevertheless attention has been studied scientifically for a long time because a variety of tasks allow researchers to control several of its aspects e g focused and feature based attention Consciousness as a scientific subject of study has emerged more recently but is now rapidly gaining

traction Scientific studies of consciousness concern the state or level of consciousness e g awake as opposed to in coma dreamless sleep or under anaesthesia as well as the contents of consciousness or the phenomenology of perception With the increase in consciousness focused research there is a concomitant surge in research examining the relationship between attention and consciousness This relationship between attention and consciousness is the topic of this Research Topic Contributions related to or focused solely on attention or on consciousness will not be considered It had long been assumed that attention and consciousness are inextricably intertwined two sides of the same coin However recently substantial evidence has emerged that attention and consciousness are interacting but separable processes It is however debated how tight the interactions are and what the exact nature of the relationship is Therefore we invite researchers from different camps to provide opinionated but balanced literature reviews Different groups will interpret the same data in different ways We feel that combining these views in one Research Topic is immensely valuable to researchers from different fields Apart from reviews we also invite potential contributors to provide new and exciting evidence in the form of original contributions that may support any of the different views Even though attention and consciousness are critical aspects of many different cognitive processes they are mainly studied though not exclusively in the domain of visual perception In other sensory modalities e g olfaction or audition it is currently not clear whether distinctions between attention and consciousness exist which is even more true for other cognitive processes such as memory Therefore we specifically invite contributions covering the auditory somatosensory olfactory and memory domain We ask all contributors to provide discussions on the relationship between attention and consciousness and focus on 1 the influence of attention on sensory processing 2 the formation of conscious perception 3 the evidence for unconscious processing and its modulation by attention 4 potential indications for dissociations between attention and consciousness e g does paying attention to a stimulus decrease performance on e g a discrimination task 5 neuroimaging and neurophysiology data pertaining to these questions Often one is caught in one's own research field and lacks the time or the knowledge to delve into another field This Research Topic should provide a great overview in great breadth of the current state of knowledge on the links between attention and consciousness and their interactions in several different sensory modalities

Learning Disabilities and Brain Function William H.

Gaddes,2013-04-17 Some may say that this book is long overdue others including myself will state that the book appears at just the right time The latter is likely more true for it is doubtful that many in the professions would until now link issues of learning disabilities with those of neurophysiological dysfunction in the manner in which ultimately must be the case As a matter of fact there are those who deny the relationship completely Lee Wiederholt 1974 1 in his short but excellent review of the historical perspectives of learning disabilities traces the early interest in this problem to the work of Gall 1802 and to his successors Broca 1861 Jackson 1864 Bastian 1869 and a few others Each of these men would at the time of this writing be considered to have interests in the field of neurology although at the time of their investigations neurology per se was but

computational models of attention Aimed at both scholars and students the Oxford Handbook of Attention provides a concise and state of the art review of the current literature in this field From Attention to Goal-Directed Behavior Francisco Aboitiz, Diego Cosmelli, 2008-11-21 Attention is a key psychological construct in the understanding of human cognition and the target of enormous efforts to elucidate its physiological mechanisms as the wealth of literature both primary and secondary attests for recent compilations see Itti Rees Paletta Posner 2004 But in addition to asking what attention actually is decomposing and analyzing its varieties or delimiting its neurobiological mechanisms and effects in this volume we want to explore attention somewhat differently We believe that a full fledged theory of attention must consider its workings in the context of motivated goal directed and environmentally constrained organisms That attention is related to goal directed behavior is not news What the contributions to this volume do suggest however is the existence of fundamental links between attention and two key processes that are crucial for adapted conduct go directed behavior and cognitive control Importantly they show that these relations can be explored at multiple levels including neurodynamical neurochemical evolutionary and clinical aspects and that in doing so multiple methodological challenges arise that are worth considering and pursuing The reader will find here therefore a selection of contributions that range from basic mechanisms of attention at the neuronal level to developmental aspects of cognitive control and its impairments Another trend that will become evident is that in different ways the authors stress the need to understand these issues as they unfold in natural behavior both healthy and pathological thus arguing for a more ecological approach to these questions
