Dernbach, 2002 In 1992 at the United Nations Conference on Environment and Development in Rio de Janeiro the nations of the world agreed to implement an ambitious plan for ecologically sustainable human development This book is a comprehensive review of U S efforts to achieve such development since Rio The U S has unquestionably begun to take steps toward sustainable development Yet the nation is now far from being a sustainable society and in many respects is farther away than it was in 1992 Nevertheless legal and policy tools are available to put the U S on a direct path to sustainability This book brings together 42 distinguished experts from a variety of backgrounds and academic disciplines It is among the most thorough assessments ever conducted of U S law and policy concerning the environment *EPA-542/B* , *Financing Eco Dev in 21st Century* , 14 International Business and Multinational Corporations in China 15 Taiwan s Recent Economy and Business Environment 16 Opportunities and Challenges for Hong Kong in the New Millennium Editors and Contributors Index **Principles of Brownfield Regeneration** Justin Hollander, Niall Kirkwood, Julia Gold, 2010-09-02 The U S EPA defines brownfields as idle real property the development or improvement of which is impaired by real or perceived contamination The authors of Principles of Brownfield Regeneration argue that compared to greenfields farmland forest or pasturelands that have never been developed brownfields offer a more sustainable land development choice They believe that brownfields are central to a sustainable strategy of thwarting sprawl preserving or regenerating open space reducing greenhouse gas emissions and reinvesting in urbanized areas Drawing on interviews with people involved in brownfield projects as well as on their own considerable expertise the authors use five case studies to describe the steps for cleaning up a site and creating viable land for development or open space **Reclaiming Brownfields** Richard C. Hula, 2016-03-23 The environmental legacy of past industrial and agricultural development can simultaneously pose serious threats to human health and impede reuse of contaminated land The urban landscape around the world is littered with sites contaminated with a variety of toxins

produced by past use Both public and private sector actors are often reluctant to make significant investments in properties that simultaneously pose significant potential human health issues and may demand complex and very expensive cleanups The chapters in this volume recognize that land and water contamination are now almost universally acknowledged to be key social economic and political issues How multiple societies have attempted to craft and implement public policy to deal with these issues provides the central focus of the book The volume is unique in that it provides a global comparative perspective on brownfield policy and examples of its use in a variety of countries
