A Modern Theory of Factorial Design Rahul Mukerjee,C.F. J. Wu,2007-01-15 Factorial design plays a fundamental role in efficient and economic experimentation with multiple input variables and is extremely popular in various fields of application including engineering agriculture medicine and life sciences Factorial experiments are often used in case studies in quality management and Design for Six Sigma DFSS The last twenty years have witnessed a significant growth of interest in optimal factorial designs under possible model uncertainty via the minimum aberration and related criteria The present book gives for the first time in book form a comprehensive and up to date account of this modern theory Many major classes of designs are covered in the book While maintaining a high level of mathematical rigor it also provides extensive design tables for research and practical purposes In order to equip the readers with the necessary background some foundational concepts and results are developed in Chapter 2 Apart from being useful to researchers and practitioners the book can form the core of a graduate level course in experimental design It can also be used for courses in combinatorial designs or combinatorial mathematics

A Modern Theory of Factorial Design Rahul Mukerjee,C.F. J. Wu,2006-06-21 The last twenty years have witnessed a significant growth of interest in optimal factorial designs under possible model uncertainty via the minimum aberration and related criteria This book gives for the first time in book form a comprehensive and up to date account of this modern theory Many major classes of designs are covered in the book While maintaining a high level of mathematical rigor it also provides extensive design tables for research and practical purposes Apart from being useful to researchers and practitioners the book can form the core of a graduate level course in experimental design

Handbook of Design and Analysis of Experiments Angela Dean,Max Morris,John Stufken,Derek Bingham,2015-06-26 This carefully edited collection synthesizes the state of the art in the theory and applications of designed experiments and their analyses It provides a detailed overview of the tools required for the optimal design of experiments and their analyses The handbook covers many recent advances in the field including designs for nonlinear models and algorithms applicable to a wide variety of design problems It also explores the extensive use of experimental designs in marketing the pharmaceutical industry engineering and other areas

Advanced Methods in Statistics, Data Science and Related Applications Matilde Bini,Antonio Balzanella,Lucio Masserini,Rosanna Verde,2024-10-16 This book contains a selection of the improved contributions submitted by participants at the conference of the Italian Statistical Society SIS 2022 held in Caserta 22 24 June 2022 The scientific community of Italian statistics which gathers around the SIS is paying particular attention to the development of statistical techniques increasingly oriented toward the processing of large data mainly of complex data The main goal is to provide the analysis of the data and the interpretability of the obtained results with a view to decision support and the reliability of the data outcomes The aim of this volume is to show some of the most relevant contributions of statistical and data analysis methods in preserving the quality of the information to be processed especially when it comes from different

often non official sources as well as in the extraction of knowledge from complex data textual network unstructured and multivalue and in the explicability of results Data Science today represents a broad domain of knowledge development from data where statistical and data analysis methods can make an important contribution in the different domains where data management and processing are required This volume is addressed to researchers but also to Ph D and MSc students in the field of Statistics and Data Science to acquaint them with some of the most recent developments towards which statistical research is orienting in prevalence in Italy

Life Distributions Albert W. Marshall, Ingram Olkin, 2007-10-13 For over 200 years practitioners have been developing parametric families of probability distributions for data analysis More recently an active development of nonparametric and semiparametric families has occurred This book includes an extensive discussion of a wide variety of distribution families nonparametric semiparametric and parametric some well known and some not An all encompassing view is taken for the purpose of identifying relationships origins and structures of the various families A unified methodological approach for the introduction of parameters into families is developed and the properties that the parameters imbue a distribution are clarified These results provide essential tools for intelligent choice of models for data analysis Many of the results given are new and have not previously appeared in print This book provides a comprehensive reference for anyone working with nonnegative data

Computational and Statistical Methods for Chemical Engineering Wim P. Krijnen, Ernst C. Wit, 2022-12-19 In the recent decades the emerging new molecular measurement techniques and their subsequent availability in chemical database has allowed easier retrieval of the associated data by the chemical analyst Before the data revolution most books focused either on mathematical modeling of chemical processes or exploratory chemometrics Computational and Statistical Methods for Chemical Engineering aims to combine these two approaches and provide aspiring chemical engineers a single comprehensive account of computational and statistical methods The book consists of four parts Part I discusses the necessary calculus linear algebra and probability background that the student may or may not have encountered before Part II provides an overview on standard computational methods and approximation techniques useful for chemical engineering systems Part III covers the most important statistical models starting from simple measurement models via linear models all the way to multivariate non linear stoichiometric models Part IV focuses on the importance of designed experiments and robust analyses Each chapter is accompanied by an extensive selection of theoretical and practical exercises The book can be used in combination with any modern computational environment such as R Python and MATLAB Given its easy and free availability the book includes a bonus chapter giving a simple introduction to R programming This book is particularly suited for undergraduate students in Chemical Engineering who require a semester course in computational and statistical methods The background chapters on calculus linear algebra and probability make the book entirely self contained The book takes its examples from the field of chemistry and chemical engineering In this way it motivates the student to engage actively with the material and to master the techniques that have become crucial for the

modern chemical engineer *Optimum Experimental Designs, With SAS* Anthony Atkinson, Alexander Donev, Randall Tobias, 2007-05-24 Experiments in the field and in the laboratory cannot avoid random error and statistical methods are essential for their efficient design and analysis Authored by leading experts in key fields this text provides many examples of SAS code results plots and tables along with a fully supported website *Information Criteria and Statistical Modeling* Sadanori Konishi, Genshiro Kitagawa, 2007-09-12 The Akaike information criterion AIC derived as an estimator of the Kullback Leibler information discrepancy provides a useful tool for evaluating statistical models and numerous successful applications of the AIC have been reported in various fields of natural sciences social sciences and engineering One of the main objectives of this book is to provide comprehensive explanations of the concepts and derivations of the AIC and related criteria including Schwarz's Bayesian information criterion BIC together with a wide range of practical examples of model selection and evaluation criteria A secondary objective is to provide a theoretical basis for the analysis and extension of information criteria via a statistical functional approach A generalized information criterion GIC and a bootstrap information criterion are presented which provide unified tools for modeling and model evaluation for a diverse range of models including various types of nonlinear models and model estimation procedures such as robust estimation the maximum penalized likelihood method and a Bayesian approach **Statistical Decision Theory** F. Liese, Klaus-J. Miescke, 2008-12-30 This monograph is written for advanced Master's students Ph D students and researchers in mathematical statistics and decision theory It should be useful not only as a basis for graduate courses seminars Ph D programs and self studies but also as a reference tool At the very least readers should be familiar with basic concepts covered in both advanced undergraduate courses on probability and statistics and introductory graduate level courses on probability theory mathematical statistics and analysis Most statements and proofs appear in a form where standard arguments from measure theory and analysis are sufficient When additional information is necessary technical tools additional measure theoretic facts and advanced probabilistic results are presented in condensed form in an appendix In particular topics from measure theory and from the theory of weak convergence of distributions are treated in detail with reference to modern books on probability theory such as Billingsley 1968 Kallenberg 1997 2002 and Dudley 2002 Building on foundational knowledge this book acquaints readers with the concepts of classical finite sample size decision theory and modern asymptotic decision theory in the sense of LeCam To this end systematic applications to the fields of parameter estimation testing hypotheses and selection of populations are included Some of the problems contain additional information in order to round off the results whereas other problems equipped with solutions have a more technical character The latter play the role of auxiliary results and as such they allow readers to become familiar with the advanced techniques of mathematical statistics *Log-Linear Modeling* Alexander von Eye, Eun-Young Mun, 2014-08-21 An easily accessible introduction to log linear modeling for non statisticians Highlighting advances that have lent to the topic's distinct coherent methodology over the past decade Log Linear Modeling Concepts Interpretation and Application provides

an essential introductory treatment of the subject featuring many new and advanced log linear methods models and applications The book begins with basic coverage of categorical data and goes on to describe the basics of hierarchical log linear models as well as decomposing effects in cross classifications and goodness of fit tests Additional topics include The generalized linear model GLM along with popular methods of coding such as effect coding and dummy coding Parameter interpretation and how to ensure that the parameters reflect the hypotheses being studied Symmetry rater agreement homogeneity of association logistic regression and reduced designs models Throughout the book real world data illustrate the application of models and understanding of the related results In addition each chapter utilizes R SYSTAT and EM software providing readers with an understanding of these programs in the context of hierarchical log linear modeling Log Linear Modeling is an excellent book for courses on categorical data analysis at the upper undergraduate and graduate levels It also serves as an excellent reference for applied researchers in virtually any area of study from medicine and statistics to the social sciences who analyze empirical data in their everyday work
