Abductive Inference Models For Diagnostic Problem Solving Symbolic Computation:

Abductive Inference Models for Diagnostic Problem-Solving Yun Peng, James A. Reggia, 2012-12-06 Making a diagnosis when something goes wrong with a natural or man-made system can be difficult. In many fields such as medicine or electronics a long training period and apprenticeship are required to become a skilled diagnostician. During this time a novice diagnostician is asked to assimilate a large amount of knowledge about the class of systems to be diagnosed. In contrast the novice is not really taught how to reason with this knowledge in arriving at a conclusion or a diagnosis except perhaps implicitly through case examples. This would seem to indicate that many of the essential aspects of diagnostic reasoning are a type of intuition-based common sense reasoning. More precisely diagnostic reasoning can be classified as a type of inference known as abductive reasoning or abduction. Abduction is defined to be a process of generating a plausible explanation for a given set of observations or facts. Although mentioned in Aristotle's work the study of formal aspects of abduction did not really start until about a century ago.

Divided into three parts on the conceptual framework the logical foundations and the applications this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning via the logical workings of abductive inference ending with applications pertinent to scientific explanation empirical progress pragmatism and belief revision.
