Anything For A Better Grade

**Paul E. Peterson, Michael B.
Henderson, Martin R. West**

Anything For A Better Grade:

Live Stock Report, 1894 **The Lumber World**, 1909 **Hearings** United States. Congress. House. Committee on Agriculture, 1926 *Everything You and Your Teachers Need to Know About the Learning Brain* Sabine Peters, Nienke van Atteveldt, Jessica Massonnié, Stephan E. Vogel, 2020-12-08

Children go to school to learn and learning takes place in the brain. In the age period of formal schooling a child's brain is still undergoing major developmental changes. For these reasons neuroscience, the study of the brain and education, are closely connected. Learning is possible because the brain is plastic; plasticity refers to the capacity of the brain to reorganize its structure and thereby change function and behavior. But what exactly changes in the brain when we learn something new? What are optimal conditions for the brain to learn? Why do we also forget things? What developmental changes occur in the brain during childhood and adolescence and how are these processes different or similar to the neural mechanisms of learning and memory? Neuroimaging research or brain scanning has accelerated our current understanding of brain development, learning, memory, and other school-related skills such as reading and math, but also creativity, metacognition, and learning-related emotions and anxieties. But what do these brain scanning techniques actually measure? What kind of questions can we address with neuroimaging and what are the limitations? In this Collection we will provide an accessible overview of the current state of the art, insights into the mechanisms of brain development, learning, and memory. The collection will help children understand how their brains learn and develop and how these processes are shaped by their environment and their own efforts. Moreover, we will discuss why it is important that their teachers and other educational practitioners know about the brain and neuroscience methods. Finally, we will also explain what happens if wrong ideas about the brain circulate or the correct knowledge is misinterpreted. Neuromyths such as "we only use 10 percent of our brain" are persistent but important to counter with explaining why they are false and what is true instead.

Teachers Versus the Public Paul E. Peterson, Michael B. Henderson, Martin R. West, 2014-04-29

A comprehensive exploration of 21st Century school politics, *Teachers versus the Public* offers the first comparison of the education policy views of both teachers and the public as a whole and reveals a deep, broad divide between the opinions held by citizens and those who teach in the public schools. Among the findings: Divisions between teachers and the public are wider and deeper than differences between other groups often thought to contest school policy, such as Republicans and Democrats, the young and the old, the rich and the poor, or African Americans and whites. The teacher-public gap is widest on such issues as merit pay, teacher tenure reform, impact of teacher unions, school vouchers, charter schools, and requirements to test students annually. Public support for school vouchers for all students, charter schools, and parent trigger laws increases sharply when people are informed of the national ranking of student performance in their local school district. Public willingness to give local schools high marks, its readiness to support higher spending levels, and its support for teacher unions all decline when the public learns the national ranking of their local schools. On most issues, teacher opinion does not change.

in response to new information nearly as much as it does for the public as a whole In fact the gap between what teachers and the public think about school reform grows even wider when both teachers and the public are given more information about current school performance current expenditure levels and current teacher pay The book provides the first experimental study of public and teacher opinion Using a recently developed research strategy the authors ask differently worded questions about the same topic to randomly chosen segments of representative groups of citizens This approach allows them to identify the impact on public opinion of new information on issues such as student performance and school expenditures in each respondent s community The changes in public opinion when citizens receive information about school performance are largest in districts that perform below the national average Altogether the results indicate that support for many school reforms would increase if common core state standards were established and implemented in such a way as to inform the public about the quality of their local schools These and many other findings illuminate the distance between teacher opinions and those of the public at large About the Research In partnership with the Harvard Program on Education Policy and Governance and the journal Education Next authors Paul E Peterson Martin West and Michael Henderson surveyed nationally representative samples of teachers and the public as a whole annually between 2007 and 2013
