Levine, 2012-12-06 Bringing together the reflections of an architectural theorist and a philosopher this book encourages philosophers and architects scholars and designers alike to reconsider what they do as well as what they can do in the face of challenging times It does so by exploring the notion that architecture and design can and possibly should in their own right make for a distinctive form of ethical investigation The book is less concerned with absolutist understandings of the two components of ethics a theory of the good and a theory of the right than with remaining open to multiple relations between ideas about the built environment design practices and the plurality of kinds of human subjects inhabitants individuals and communities accommodated by buildings and urban spaces The built environment contributes to the inculcation of all sorts of values good and bad Thus this book aims to change the way people commonly think about ethics not only in relation to the built environment but to themselves their ways of thinking and modes of behaviour

The Practice Turn in Architecture: Brussels after 1968 Isabelle Doucet, 2016-07-07 What makes a city What makes architecture And what is to be included in the discussions of architecture and the city Attempting to answer such ambitious questions this book starts from a city's specificity and complexity In response to recent debates in architectural theory around the agency and locus of critical action this book tests the potential of criticality through practice Rather than through conceptual and ideological categorisations it studies how architecture and criticality work within specific circumstances Brussels a complex city with a turbulent architectural and urban past forms a compelling case for

examining the tensions between urban politics architectural imaginations society's needs and desires and the city's history and fabric Inspired by pragmatist relational philosophies this book tests the potential of criticality through practice It studies a series of critical actions and tools which occurred in Brussels architectural and urban culture after 1968 Weaved together Brussels architectural production emerges from a variety of actors including architects urban policy makers activists social workers and citizens but also architectural movements and ideologies urban renewal programs urban traumas plans and projects and mundane everyday practices and constructions This book contributes to the study of Brussels and offers a timely contribution to recent scholarship on the critical reappraisal of architectural debates from the 1960s through to the 1990s In addition by showing how pragmatist relational philosophies can be made relevant for architectural theory the book opens hopeful potentials for how architectural theory can better contribute to the formulation of a critical agenda for architecture

Thinking Through Twentieth-Century Architecture Nicholas Ray, 2023-02-08 Shortlisted for the Architectural Book Awards 2024 Thinking Through Twentieth Century Architecture connects the practice of architecture with its recent history and its theoretical origins those philosophical ideas that lay behind modernism and its aftermath By analyzing in straightforward and jargon free language the genesis of modernism and the complex reactions to it the book clarifies a continuing debate It has been specifically written to connect issues of theory history and contemporary practice and to allow students to make these connections easily This is a history of twentieth century architecture written with close critical attention to the theories that lie behind the works described Importantly unlike other historical accounts it does not take sides and urge the reader to identify with one strand of thinking or style of architecture at the expense of others but it presents a dispassionate view with persuasive arguments on behalf of different positions It pursues the history of European and American architecture chronologically but the history is interwoven with the philosophical ideas that informed both writers and architects and are essential for its understanding The book is relevant to current issues of contemporary practice and education showing that philosophical issues are fundamental and those relating to design decisions never go away It includes 200 illustrations and will appeal to all those interested in twentieth century architecture and to architectural students
