Artificial Immune Systems Artificial Immune Systems:

Artificial Immune Systems: A New Computational Intelligence Approach Leandro Nunes de Castro, Jonathan Timmis, 2002-09-23 Artificial Immune Systems AIS are adaptive systems inspired by the biological immune system and applied to problem solving This book provides an accessible introduction that will be suitable for anyone who is beginning to study or work in this area It gives a clear definition of an AIS sets out the foundations of the topic including basic algorithms and analyses how the immune system relates to other biological systems and processes No prior knowledge of immunology is needed all the essential background information is covered in the introductory chapters Key features of the book include A discussion of AIS in the context of Computational Intelligence Case studies in Autonomous Navigation Computer Network Security Job Shop Scheduling and Data Analysis B7 An extensive survey of applications A framework to help the reader design and understand AIS A web site with additional resources including pseudocodes for immune algorithms and links to related sites Written primarily for final year undergraduate and postgraduate students studying Artificial Intelligence Evolutionary and Biologically Inspired Computing this book will also be of interest to industrial and academic researchers working in related areas [Artificial Immune Systems and Their Applications](#) Dipankar Dasgupta, 2012-12-06 Artificial immune systems are highly distributed systems based on the principles of the natural system This is a new and rapidly growing field offering powerful and robust information processing capabilities for solving complex problems Like artificial neural networks artificial immune systems can learn new information recall previously learned information and perform pattern recognition in a highly decentralized fashion This volume provides an overview of the immune system from the computational viewpoint It discusses computational models of the immune system and their applications and provides a wealth of insights on immunological memory and the effects of viruses in immune response It will be of professional interest to scientists academics vaccine designers and practitioners [Artificial Immune Systems](#) Emma Hart, 2010 Artificial immune systems AIS is a diverse and maturing area of research that bridges the disciplines of immunology and computation The original research impetus in AIS had a clear focus on applying immunological principles to computational problems in practical domains such as computer security data mining and optimization As the field has matured it has diversified such that we now see a growing interest in formalizing the theoretical properties of earlier approaches elaborating underlying relationships between applied computational models and those from theoretical immunology as well a return to the roots of the domain in which the methods of computer science are being applied to immunological modelling problems Following the trends in the field the ICARIS conference intends to provide a forum for all these perspectives The 9th International Conference on AIS ICARIS 2010 built on the success of previous years providing a convenient vantage point for broader reflection as it returned to Edinburgh the venue of the Second ICARIS in 2003 This time the conference was hosted by Edinburgh Napier University at its Craiglockhart Campus recently reopened after extensive refurbishment which has

resulted in a stunning building and state of the art facilities The extent to which the eld has matured over the preceding years is clear a substantial track of theor ical research now underpins the discipline The applied stream has expanded in its outlook and has examples of AIS algorithms being applied across a wide spectrum of practical problems ranging from sensor networks to semiconductor design
