Artificial Intelligence In Highway Location And Alignment Optimization: Applications Of Genetic Algorithms In Searching, Evaluating, And Optimizing Highway Location And Alignments Min-wook Kang,Paul

Schonfeld,2020-08-14 This monograph provides a comprehensive overview of methods for searching evaluating and optimizing highway location and alignments using genetic algorithms GAs a powerful Artificial Intelligence AI technique It presents a two level programming structure to deal with the effects of varying highway location on traffic level changes in surrounding road networks within the highway location search and alignment optimization process In addition the proposed method evaluates environmental impacts as well as all relevant highway costs associated with its construction operation and maintenance The monograph first covers various search methods relevant cost functions constraints computational efficiency and solution quality issues arising from optimizing the highway alignment optimization HAO problem It then focuses on applications of a special purpose GA in the HAO problem where numerous highway alignments are generated and evaluated and finally the best ones are selected based on costs traffic impacts safety energy and environmental considerations A review of other promising optimization methods for the HAO problem is also provided in this monograph [Artificial Intelligence](#)

David L. Poole,Alan K. Mackworth,2010-04-19 Recent decades have witnessed the emergence of artificial intelligence as a serious science and engineering discipline Artificial Intelligence Foundations of Computational Agents is a textbook aimed at junior to senior undergraduate students and first year graduate students It presents artificial intelligence AI using a coherent framework to study the design of intelligent computational agents By showing how basic approaches fit into a multidimensional design space readers can learn the fundamentals without losing sight of the bigger picture The book balances theory and experiment showing how to link them intimately together and develops the science of AI together with its engineering applications Although structured as a textbook the book s straightforward self contained style will also appeal to a wide audience of professionals researchers and independent learners AI is a rapidly developing field this book encapsulates the latest results without being exhaustive and encyclopedic It teaches the main principles and tools that will allow readers to explore and learn on their own The text is supported by an online learning environment artint info so that students can experiment with the main AI algorithms plus problems animations lecture slides and a knowledge representation system for experimentation and problem solving *Bio-Inspired Systems: Computational and Ambient*
