Architectures For Agreement Addressing Global Climate Change In The Post Kyoto World:

Architectures for Agreement Joseph E. Aldy, Robert N. Stavins, 2007 *Architectures for Agreement* offers a uniquely wide ranging menu of options for post Kyoto climate policy

The Quest for Security Joseph E. Stiglitz, Mary Kaldor, 2013-04-23 The essays in this collection boldly confront the quest for security arising from the social economic environmental and political crises and transformations of our century Joseph E Stiglitz and Mary Kaldor begin with an expansive balanced analysis of the global landscape and the factors contributing to the growth of insecurity Whereas earlier studies have touched on how globalization has increased economic insecurity and how geopolitical changes may have contributed to military insecurity this volume looks for some common threads in a globalized world without a global government with a system of global governance not up to the task how do we achieve security without looking inward and stepping back from globalization In each of their areas of expertise contributors seek answers to questions about how we achieve protection of those people who are most insecure without resorting to economic military or mafia protectionism Some have suggested that the turmoil in the Eurozone proves the deficiencies in the welfare state This book argues that the superior performance of Scandinavian countries arises from their superior systems of social protection which allow their citizens to undertake greater risk and more actively participate in globalization Some suggest that we can address terrorism or transnational crimes through the strengthening of borders or long distance wars This book develops the proposition that such approaches have the opposite effect and that only through spreading the human security experienced in well ordered societies can these dangers be managed This book also examines how these global changes play out not only in the relations among countries and the management of globalization but at every level of our society especially in our cities It explores the potential for cities to ensure personal security promote political participation and protect the environment in the face of increasing urbanization

Climate Change Mitigation, Technological Innovation and Adaptation Valentine Bosetti, Carlo Carraro, Emanuele Massetti, Massimo Tavoni, 2014-06-27 This book presents provides a rigorous yet accessible treatment of the main topics in climate change policy using a large body of research generated using WITCH World Induced Technical Change Hybrid an innovative and path breaking integrated assessm

The United States in a Warming World Thomas L. Brewer, 2015 Balanced factual and conceptual analysis of the political and economic factors that shape the United States responses to climate change

Climate Change Mitigation Mitsutsune Yamaguchi, 2012-06-26 Climate change is mainly caused by emissions of CO₂ from burning fossil fuels which provides over 85% of the world s energy Strategies for mitigating climate change are connected with handling economic and social activities through their effects on the use of energy Climate Change Mitigation investigates the costs of mitigation measures in comparison to their benefits and compares the effects of implementing mitigation measures on various areas such as energy security and energy economy For 20 years diplomats have struggled to make progress on climate change mostly because global diplomacy is not well linked to the realities of how

nations and firms control emissions and adapt to the impacts of a changing climate In this excellent book Dr Yamaguchi has assembled experts to guide the redesign of global policy The authors underscore how global warming efforts must resonate with other policy goals David G Victor Director Laboratory on International Law and Regulation and Professor University of California San Diego Climate Change Mitigation clarifies that climate change cannot be controlled by sacrificing economic growth or other global problems however action to control climate change cannot be delayed Climate policy is pervasive and affects all dimensions of international policy but it cannot be too ambitious a balanced approach between mitigation and adaptation economic growth and resource management and short term development and long term investments should be adopted I recommend its reading Carlo Carraro President Ca Foscari University of Venice The International Energy Agency estimates for every 1 of investment now toward sustainable energy 4 of future spending can be saved There is a business case for companies to reduce energy use Companies in the energy and resource intensive industries must lead the way Chad Holliday Chairman World Business Councilfor Sustainable Development and former Chair and CEO DuPont

Confronting Climate Change Council on Foreign Relations. Independent Task Force on Climate Change, George E. Pataki, Thomas J. Vilsack, Michael A. Levi, David G. Victor, David A. Victor, 2008 The Council sponsors an Independent Task Force when an issue of critical importance to U S foreign policy arises and it seems that a group diverse in backgrounds and perspectives may nonetheless be able to reach a meaningful consensus on policy through private and nonpartisan deliberations Task Force members are asked to join a consensus signifying that they endorse the general policy thrust and judgments reached by the group though not necessarily every finding and recommendation Individual views and dissents that sharpen differences of analysis and prescription are also encouraged Once formed Task Forces are independent Upon reaching a conclusion a Task Force issues a report which the Council publishes and posts on its website Task Force chairs directors and members are solely responsible for the content of their reports Book jacket

International Climate Negotiation Factors Wytze van der Gaast, 2016-10-05 Providing a detailed examination of climate negotiations records since the 1990s this book shows that in addition to agreeing on climate policy frameworks the negotiations process is of crucial importance to success Shedding light on the dynamics of international climate policymaking its respective chapters explore key milestones such as the Kyoto Protocol Marrakech Accords Cancun Agreement and Doha Framework The book identifies a minimum of three conditions that need to be fulfilled for successful climate negotiations the negotiations need to reflect the fact that climate change calls for global solutions the negotiation process must be flexible including multiple trajectories and several small steps and decisive tactical maneuvers need to be made as much can depend on for example personalities and the negotiating atmosphere With regard to the design of an international climate policy regime the main challenge presented has been the inability to agree on globally supported greenhouse gas emission reduction measures The book offers an excellent source of information for researchers policymakers and advisors alike

Energy Infrastructure and Policy Options for a

Sustainable Future Michael Rodi, 2012 The combined edition of 2009 2010 of the international and interdisciplinary Summer Academy proceedings sheds light on major challenges in the field of energy and the environment climate policy renewable energy and grid related questions The collection of articles begins with an overview of efforts in the field of international climate policy and development such as the United Nations CDM Clean Development Mechanism It goes on to study the regional particularities of climate and environmental policy making using case studies from Europe China and Africa Finally the proceedings consider the important part that energy will play in curbing climate change After all this sector is the major contributor of CO2 emissions and therefore the major cause of global warming Transitional energy sources like gas will be discussed and the necessary adjustments to our current energy infrastructure will be analyzed in case studies on grids from South America and Europe

Fairness in International Climate Change Law and Policy Friedrich Soltau, 2009-09-14 This work analyses fairness dimensions of the climate regime A central issue in international law and policy is how countries of the world should allocate the burden of addressing global climate change With the link between human activities and climate change clearly established and the first impacts of climate change being felt there is a renewed sense of urgency in addressing the problem On the basis of an overview of science and the development of the climate regime this book seeks to identify the elements of a working consensus on fairness principles that could be used to solve the seemingly intractable problem of assigning responsibility for combating climate change The book demonstrates how an analysis of fairness dimensions of climate change grounded in practical developments and illustrated with reference to the key issues can add value to our understanding of the options for international climate law and policy

Distributional Choices in EU Climate Change Law and Policy Javier De Cendra de Larragán, 2011-01-01 Climate change policy inevitably has two core components the goals and the means chosen to pursue those goals Decisions on goals and means necessarily have distributional consequences Any policy choice generates winners and losers While this outcome cannot be avoided even doing nothing leads to distributional consequences policymakers can through the choice design and implementation of policies shape to some extent the distribution of the burdens of mitigation and adaptation to climate change In greater depth than any previous legal study in the field this book deals with the way in which the European Union EU has dealt with climate change and with the distribution of the benefits and costs of climate change mitigation policies among affected parties With extraordinary thoroughness the author assesses the legality of choices made particularly concerning mitigation targets and timelines and examines the role that legal principles can play in the adoption interpretation and judicial testing of distributional choices His analysis of the tension between such choices and EU law is bolstered by an exploration of emerging legal principles which could provide additional guidance in this challenging and controversial area Among the core issues dealt with are the following relationship among mitigation adaptation and sustainable development regulations as means to make distributional choices distributional choices between generations and

the principle of intergenerational justice distributional choices concerning firms and individuals the participation of affected parties in distributional choices access to justice in EU courts to challenge violations of procedural environmental rights the role of legal principles in making evaluating and testing distributional choices the principle of proportionality with its tests of appropriateness and necessity the principle of equality the precautionary principle the principle of prevention the polluter pays principle A concluding chapter offers deeply informed recommendations regarding the design of EU climate change law including a preliminary assessment of EU wide personal carbon trading In its insightful illumination of how the inevitable trade offs weaknesses inconsistencies and ambiguities in the way law deals with distributional choices renders them vulnerable to external pressures this book will be of enormous value to regulators and policymakers concerned with effective efficient and fair climate change measures As a critical assessment of existing EU climate change laws and policies and as a systematic analysis of the problem of burden sharing this book will also prove highly valuable to academics in environmental fields of study
