

Study Guide

Chapter 24 Section 2: Anthropoid Characteristics

As you read, write about anthropoid features.

Use each of the terms below only once, except for the phrase.

anthropoid
tooth

prognathic
maxilla

canine teeth
upper jaw

groove
tooth

incisors
ear hole

Prognathic refers to the position of the **maxilla**. Anthropoids can be described as **not** prognathic. Instead, they have a **reduced** **prognathic** **maxilla**. Anthropoids also have **smaller** **canine teeth** relative to **other** **primates**. **Other** **primates** have **large** **canine teeth**. Anthropoids have **smaller** **canine teeth** and **smaller** **incisors**. They also have **smaller** **incisors** and **smaller** **ear holes**.

As you read, write about the **anthropoid** **features**.

Complete the table by filling in the missing information.

Feature	Explanation
Prognathic tooth	1. prognathic
Small canine teeth	2. smaller

Arthropod Diversity Study Guide Answer Key

**Geoff M. Gurr, Stephen D.
Wratten, William E. Snyder**

Arthropod Diversity Study Guide Answer Key:

Arthropod Biology and Evolution Alessandro Minelli, Geoffrey Boxshall, Giuseppe Fusco, 2013-04-11 More than two thirds of all living organisms described to date belong to the phylum Arthropoda But their diversity as measured in terms of species number is also accompanied by an amazing disparity in terms of body form developmental processes and adaptations to every inhabitable place on Earth from the deepest marine abysses to the earth surface and the air The Arthropoda also include one of the most fashionable and extensively studied of all model organisms the fruit fly whose name is not only linked forever to Mendelian and population genetics but has more recently come back to centre stage as one of the most important and more extensively investigated models in developmental genetics This approach has completely changed our appreciation of some of the most characteristic traits of arthropods as are the origin and evolution of segments their regional and individual specialization and the origin and evolution of the appendages At approximately the same time as developmental genetics was eventually turning into the major agent in the birth of evolutionary developmental biology evo devo molecular phylogenetics was challenging the traditional views on arthropod phylogeny including the relationships among the four major groups insects crustaceans myriapods and chelicerates In the meantime palaeontology was revealing an amazing number of extinct forms that on the one side have contributed to a radical revisitation of arthropod phylogeny but on the other have provided evidence of a previously unexpected disparity of arthropod and arthropod like forms that often challenge a clear cut delimitation of the phylum Ecology of Lianas Stefan Schnitzer, Frans Bongers, Robyn J. Burnham, Francis E.

Putz, 2014-10-24 Lianas are woody vines that were the focus of intense study by early ecologists such as Darwin who devoted an entire book to the natural history of climbing plants Over the past quarter century there has been a resurgence in the study of lianas and liana are again recognized as important components of many forests particularly in the tropics The increasing amount of research on lianas has resulted in a fundamentally deeper understanding of liana ecology evolution and life history as well as the myriad roles lianas play in forest dynamics and functioning This book provides insight into the ecology and evolution of lianas their anatomy physiology and natural history their global abundance and distribution and their wide ranging effects on the myriad organisms that inhabit tropical and temperate forests *Arthropods of Tropical Forests* Yves Basset, 2003-01-23 Arthropods are the most diverse group of organisms on our planet and the tropical rainforests represent the most biologically diverse of all ecosystems This book written by 79 authors contributing to 35 chapters aims to provide an overview of data collected during recent studies in Australia Africa Asia and South America The book focuses on the distribution of arthropods and their use of resources in the rainforest canopies providing a basis for comparison between the forest ecosystems of the main biogeographical regions Topics covered include the distribution of arthropods along vertical gradients and the relationship between the soil litter habitat and the forest canopy The temporal dynamics of arthropod communities habitats and food selection are examined within and among tropical tree crowns as are

the effects of forest disturbance This important book is a valuable addition to the literature used by community ecologists conservation biologists entomologists botanists and forestry experts *Biodiversity across Afrotropical Environments* David Horák, Vincent Ralph Clark, Kevin Y. Njabo, Jon Fjeldså, Vincent Deblauwe, 2023-02-13
