A Reef in Time J.E.N. Veron, 2008-01-31 Like many coral specialists fifteen years ago Veron thought Australia's Great Barrier Reef was impervious to climate change Then he saw for himself the devastation that elevated sea temperatures can inflict on corals

The Biology of Coral Reefs Charles R. C. Sheppard, Simon K. Davy, Graham M. Pilling, Nicholas A. J. Graham, 2018 Coral reefs represent the most spectacular and diverse marine ecosystem on the planet as well as a critical source of income for millions of people However the combined effects of human activity have led to a rapid decline in the health of reefs worldwide with many now facing complete destruction Their world wide deterioration and over exploitation has continued and even accelerated in many areas since the publication of the first edition in 2009 At the same time there has been a near doubling in the number of scientific papers that have been written in this short time about coral reef biology and the ability to acclimate to ocean warming and acidification This new edition has been thoroughly revised and updated incorporating the significant increase in knowledge gained over the last decade whilst retaining the book's focus as a concise and affordable overview of the field *The Biology of Coral Reefs* provides an integrated overview of the function physiology ecology and behaviour of coral reef organisms Each chapter is enriched with a selection

of boxes on specific aspects written by internationally recognised experts As with other books in the Biology of Habitats Series the emphasis in this book is on the organisms that dominate this marine environment although pollution conservation climate change and experimental aspects are also included Indeed particular emphasis is placed on conservation and management due to the habitat s critically endangered status A global range of examples is employed which gives the book international relevance

Disappearing Destinations Andrew L. Jones, Michael R. Phillips, M. Phillips, 2011 Current climatic and environmental trends mean that a large number of important coastal destinations across the globe are under threat of change or gradual disappearance Many of these locations are also significant tourist destinations such as the Great Barrier Reef the Everglades National Park or large swathes of the Mediterranean basin Tourism activity both exacerbates the problem and highlights the importance of protecting these often fragile environments This book discusses threats to and consequences of tourism growth and the impacts of climate change on such coastal zones It examines policy initiatives local and national options for managing the potential crisis and recommends steps and management options towards ameliorating projected impacts on coastal tourism infrastructure This is an important book for researchers and students of leisure and tourism land use planning environmental and coastal management and all those interested in and working with the environment conservation and sustainability

The Planetary Clock Paul Giles, 2021-02-11 The theme of *The Planetary Clock* is the representation of time in postmodern culture and the way temporality as a global phenomenon manifests itself differently across an antipodean axis To trace postmodernism in an expansive spatial and temporal arc from its formal experimentation in the 1960s to environmental concerns in the twenty first century is to describe a richer and more complex version of this cultural phenomenon Exploring different scales of time from a Southern Hemisphere perspective with a special emphasis on issues of Indigeneity and the Anthropocene *The Planetary Clock* offers a wide ranging revisionist account of postmodernism reinterpreting literature film music and visual art of the post 1960 period within a

planetary framework By bringing the culture of Australia and New Zealand into dialogue with other Western narratives it suggests how an antipodean impulse involving the transposition of the world into different spatial and temporal dimensions has long been an integral if generally occluded aspect of postmodernism Taking its title from a Florentine clock designed in 1510 to measure worldly time alongside the rotation of the planets The Planetary Clock ranges across well known American postmodernists John Barth Toni Morrison to more recent science fiction writers Octavia Butler Richard Powers while bringing the US tradition into juxtaposition with both its English Philip Larkin Ian McEwan and Australian Les Murray Alexis Wright counterparts By aligning cultural postmodernism with music Messiaen Ligeti Birtwistle the visual arts Hockney Blackman Fiona Hall and cinema Rohmer Haneke Tarantino this volume enlarges our understanding of global postmodernism for the twenty first century

Coral Reefs Peter F. Sale, 2021-05-25 An eye opening introduction to the complexity wonder and vital roles of coral reefs When mass coral bleaching and die offs were first identified in the 1980s and eventually linked to warming events the scientific community was sure that such a dramatic and unambiguous signal would serve as a warning sign about the devastating effects of global warming Instead most people ignored that warning Subsequent decades have witnessed yet more degradation Reefs around the world have lost more than 50 percent of their living coral since the 1970s In this book distinguished marine ecologist Peter F Sale imparts his passion for the unexpected beauty complexity and necessity of coral reefs By placing reefs in the wider context of global climate change Sale demonstrates how their decline is more than simply a one off environmental tragedy but rather an existential warning to humanity He offers a reframing of the enormous challenge humanity faces as a noble venture to steer the planet into safe waters that might even retain some coral reefs

Curating the Future Jennifer Newell, Libby Robin, Kirsten Wehner, 2016-08-12 Curating the Future Museums Communities and Climate Change explores the way museums tackle the broad global issue of climate change It explores the power of real objects and collections to stir hearts and minds to engage communities affected by change Museums work through exhibitions events and specific collection projects to reach different communities in different ways The book emphasises the moral responsibilities of museums to address climate change not just by communicating science but also by enabling people already affected by changes to find their own ways of living with global warming There are museums of natural history of art and of social history The focus of this book is the museum communities like those in the Pacific who have to find new ways to express their culture in a new place The book considers how collections in museums might help future generations stay in touch with their culture even where they have left their place It asks what should the people of the present be collecting for museums in a climate changed future The book is rich with practical museum experience and detailed projects as well as critical and philosophical analyses about where a museum can intervene to speak to this great conundrum of our times Curating the Future is essential reading for all those working in museums and grappling with how to talk about climate change It also has academic applications in courses of museology and museum studies cultural studies
