Students | As per NEP 2020 Model Syllabus** Aditya Arya, This book stands out as a comprehensive and student centric resource tailored to the NEP aligned microbiology syllabus for Odisha. Its well structured unit wise approach blends conceptual depth with real world applications in healthcare, agriculture and biotechnology. The most comprehensive and up to date volume on environmental analysis available today. This is the standard laboratory reference for any environmental or chemical engineer, chemist or scientist. Today environmental issues are a great cause of concern at the global level and universities and other institutions around the world are involved in research on climate change, deforestation, pollution control and many other issues. Moreover, environmental science and environmental biotechnology are inherent parts of various courses while some universities provide degrees in these fields. Although the environment perspective of water is discussed time and again in research, academic and non academic discussions, there is no book summarizing protocols involved in water quality analysis. The information seems to be sporadically distributed on the internet. Even if available, at all the information does not discuss limits of the protocols or caveats involved. For example, essays on chemical oxygen demand (COD) on the internet mostly do not discuss differences between organic compounds of biological origin and aliphatic/aromatic. The authors have performed nearly all the protocols mentioned in this new volume and their protocols are discussed in a simplified, easy to understand manner. The book has been written after elaborative discussions with and input from faculty and research students to ensure the clarity of the material for use on many levels. Further, the authors have emphasized low cost methods which involve minimal use of high end instrumentation, keeping in mind limitations faced in developing countries. A valuable reference for engineers, scientists, chemists and students, this volume is applicable to many different fields across many different industries at all levels. It is a must have for any library.     **Bergey's Manual of Determinative Bacteriology** John G. Holt, 1994. Covers the nature of bacterial identification schemes, the differentiation of procaryotic from eucaryotic microorganisms and major categories and groups of bacteria.     **Diseases of Field Crops: Diagnosis and Management** J. N. Srivastava, A. K. Singh, 2020-05-16. Plant diseases cause yield loss in crop production, poor quality of produce and great economic losses as well. Knowledge of the perpetuation and spread of the pathogens and various factors affecting disease development is an important need. Disease
