D. McCullough, 2021-03-03 BUSINESS EXPERIMENTS with R A unique text that simplifies experimental business design and is dedicated to the R language Business Experiments with R offers a guide to and explores the fundamentals of experimental business designs The book fills a gap in the literature to provide a text on the topic of business statistics that addresses issues such as small samples lack of normality and data confounding The author a noted expert on the topic puts the focus on the A B tests and their variants that are widely used in industry but not typically covered in business statistics textbooks The

text contains the tools needed to design and analyze two treatment experiments i.e. A/B tests to answer business questions. The author highlights the strategic and technical issues involved in designing experiments that will truly affect organizations. The book then builds on the foundation in Part I and expands the multivariable testing. Since today's companies are using experiments to solve a broad range of problems, *Business Experiments with R* is an essential resource for any business student. This important text presents the key ideas that business students need to know about experiments. Offers a series of examples focusing on a specific business question. Helps develop the ability to frame ill-defined problems and determine what data and analysis would provide information about that problem. Written for students of general business marketing and business analytics. *Business Experiments with R* is an important text that helps to answer business questions by highlighting the strategic and technical issues involved in designing experiments that will truly affect organizations. Cause and Effect Business Analytics and Data Science Dominique Haughton, Jonathan Haughton, Victor S. Y. Lo, 2025-07-15 Among the most important questions that businesses ask are some very simple ones: If I decide to do something, will it work? And if so, how large are the effects? To answer these predictive questions and later base decisions on them, we need to establish causal relationships. Establishing and measuring causality can be difficult. This book explains the most useful techniques for discerning causality and illustrates the principles with numerous examples from business. It discusses randomized experiments (aka A/B testing) and techniques such as propensity score matching, synthetic controls, double differences, and instrumental variables. There is a chapter on the powerful AI approach of Directed Acyclic Graphs (aka Bayesian Networks), another on structural equation models, and one on time series techniques including Granger causality. At the heart of the book are four chapters on uplift modeling, where the goal is to help firms determine how best to deploy their resources for marketing or other interventions. We start by modeling uplift, discuss the test and learn process, and provide an overview of the prescriptive analytics of uplift. The book is written in an accessible style and will be of interest to data analysts and strategists in business, to students and instructors of business and analytics who have a solid foundation in statistics, and to data scientists who recognize the need to take seriously the need for causality as an essential input into effective decision making.
