San Francisco Bay National Estuarine Research Reserve, 2002 *A Review of the Ocean Research Priorities Plan and Implementation Strategy* National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee to Review the Joint Subcommittee on Ocean Science and Technology's Research Priorities Plan, 2007-09-25 Ocean research offers countless benefits from improving fisheries management to discovering new drugs to enabling early detection of tsunamis and hurricanes At the request of the Joint Subcommittee on Ocean Science and Technology JSOST the National Research Council convened a committee to review the draft and final versions of the Ocean Research Priorities Plan and Implementation Strategy described in Charting the

Course for Ocean Science in the United States Research Priorities for the Next Decade which represents the first coordinated national ocean research planning effort involving all federal agencies that support ocean science The plan presents an ambitious vision for ocean research that will be of great benefit to the ocean sciences community and the nation This book contains both sets of findings i e the committee s review of the JSOST s draft plan A Review of the Draft Ocean Research Priorities Plan Charting the Course for Ocean Science in the United States and the review of the final plan This book recommends that JSOST employ a variety of outreach mechanisms to continue to engage nonfederal partners in ocean research planning efforts such as establishing external committees to provide scientific and technical advice and to review progress on implementation of the research plan

Ocean Acidification National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Committee on the Development of an Integrated Science Strategy for Ocean Acidification Monitoring,2010-10-14 The ocean has absorbed a significant portion of all human made carbon dioxide emissions This benefits human society by moderating the rate of climate change but also causes unprecedented changes to ocean chemistry Carbon dioxide taken up by the ocean decreases the pH of the water and leads to a suite of chemical changes collectively known as ocean acidification The long term consequences of ocean acidification are not known but are expected to result in changes to many ecosystems and the services they provide to society Ocean Acidification A National Strategy to Meet the Challenges of a Changing Ocean reviews the current state of knowledge explores gaps in understanding and identifies several key findings Like climate change ocean acidification is a growing global problem that will intensify with continued CO₂ emissions and has the potential to change marine ecosystems and affect benefits to society The federal government has taken positive initial steps by developing a national ocean acidification program but more information is needed to fully understand and address the threat that ocean acidification may pose to marine ecosystems and the services they provide In addition a global observation network of chemical and biological sensors is needed to monitor changes in ocean conditions attributable to acidification

Atlantic Salmon in Maine National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Board on Environmental Studies and Toxicology,Committee on Atlantic Salmon in Maine,2004-10-07 Because of the pervasive and substantial decline of Atlantic salmon populations in Maine over the past 150 years and because they are close to extinction a comprehensive statewide action should be taken now to ensure their survival The populations of Atlantic salmon have declined drastically from an estimated half million adult salmon returning to U S rivers each year in the early 1800s to perhaps as few as 1 000 in 2001 The report recommends implementing a formalized decision making approach to establish priorities evaluate options and coordinate plans for conserving and restoring the salmon

Nonnative Oysters in the Chesapeake Bay National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Committee on Nonnative Oysters in the Chesapeake Bay,2004-03-09 Nonnative Oysters in the Chesapeake Bay discusses the proposed plan to offset the dramatic decline in the bay s native oysters by introducing disease resistant

reproductive Suminoe oysters from Asia It suggests this move should be delayed until more is known about the environmental risks even though carefully regulated cultivation of sterile Asian oysters in contained areas could help the local industry and researchers It is also noted that even though these oysters eat the excess algae caused by pollution it could take decades before there are enough of them to improve water quality *Shellfish Mariculture in Drakes Estero, Point Reyes National Seashore, California* National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Best Practices for Shellfish Mariculture and the Effects of Commercial Activities in Drakes Estero, Pt. Reyes National Seashore, California, 2009-08-17 When Drakes Estero which lies within the Point Reyes National Seashore PRNS about 25 miles northwest of San Francisco California was designated by Congress in 1976 as Potential Wilderness it contained a commercial shellfish mariculture operation Oyster mariculture began in Drakes Estero with the introduction of the nonnative Pacific oyster in 1932 and has been conducted continuously from that date forward Hence the cultural history of oyster farming predates the designation of Point Reyes as a National Seashore in 1962 Nevertheless with the approach of the 2012 expiration date of the current National Park Service NPS Reservation of Use and Occupancy RUO and Special Use Permit SUP that allows Drakes Bay Oyster Company DBOC to operate within the estero NPS has expressed concern over the scope and intensity of impacts of the shellfish culture operations on the estero s ecosystem Public debate over whether scientific information justifies closing the oyster farm led to the request for this study to help clarify the scientific issues raised with regard to the shellfish mariculture activities in Drakes Estero
