Rehabilitation of Sports Injuries G. Puddu, A. Giombini, A.

Selvanetti, 2013-03-09 Over the last few years in the field of sports science and medicine empirical theories about the treatment and rehabilitation of injured athletes have been gradually supported by a rapid growth of research data and scientific literature This has permitted a better knowledge of the healing process from injury and or surgery and a more appropriate understanding of the biomechanical behavior of several biological structures to load and exercise We agree with the opinion that development and advancement through a rehabilitation program should be based on the type and severity of the lesion healing time of the injured structures individual pain tolerance level possible adopted surgical procedure and sport specific biomechanical demands Currently the most recent theories on rehabilitation of the injured athlete emphasize the concepts of a multidisciplinary approach a functional recovery instead of symptomatic improvement and an early mobilization with the implementation of an individualized program treating the entire body kinetic chains Among different methods of rehabilitation the physician should choose those revealing their clinical appropriateness founded on a validated scientific data and or proven clinical efficacy Our goal has been to provide a comprehensive coverage of principles and practical

applications of the rehabilitation methods of the most common sports injuries and we have tried to combine the variety of expertise and backgrounds of a multidisciplinary group of contributing authors
