Balance Sheet

Assets are economic resources, whereas liabilities and stockholders' equity are sources of financing for the economic resources. Liabilities are economic resource providers, whereas the financing provided for the resource of the corporation is stockholders' equity, assets, liabilities, and equity are reported on the balance sheet. Every balance sheet of a corporation is based on the following equation:

FORMULA: Assets = Liabilities + Stockholders' Equity

Monitoring the balance sheet formula can help when analyzing business transactions, understanding how a transaction impacts the elements of the balance sheet in fundamental to transaction analysis, and the practice of accounting.

Net worth, calculated for both individuals and business entities, is a measure of wealth. The net worth formula is a derivative of the balance sheet equation.

FORMULA: Net Worth = Assets - Liabilities
EX: If someone owns assets worth \$750,000 and have liabilities of \$250,000, their net worth would be \$500,000 (i.e., \$750,000 - \$250,000).

Since a company's organizational chart and name system, the third section of the balance sheet is known as net assets (total of assets) or stockholders' equity. A company's balance sheet is represented by the following accounting equation:

FORMULA: Assets = Liabilities + Net Assets

Assets are the resources owned by the business. Current assets include cash, accounts, and notes receivable, inventory, and prepaid expenses. Intangible assets include long-term investments, property, and equipment, and intangible assets.

FORMULA: Assets = Current Assets + Noncurrent Assets

Liabilities are the obligations or claims of the business against the assets of that business. Current liabilities include accounts payable, notes payable, and accrued liabilities payable. Noncurrent liabilities include all long-term debt.

FORMULA: Liabilities = Current Liabilities + Noncurrent Liabilities

Sometimes there being obligations that do not show up on the balance sheet, these "off-balance sheet" liabilities are additions to the balance sheet but can be detrimental and may seriously impact the financial health of the entity.

Equity, synonymous with net worth, is the ownership interest in a company, part of equity is contributed capital, which includes financial assets by stockholders in the company's common and preferred stock, another part is retained earnings, which is the net income that has been invested in the entity since the start of its existence.

FORMULA: Stockholders' Equity = Contributed Capital + Retained Earnings

Changes in the retained earnings balance (i.e., income or decrease) can happen whenever a company is profitable (net income), is unprofitable (net loss), or pays dividends, and income increases retained earnings and dividends, which are earnings paid to stockholders, and reduce the balance of retained earnings.

FORMULA: Change in Retained Earnings = Net Income - Dividends

Net income means retained earnings in the current year period. Adjustments for overstatements of net income prior period, adjustments for understatements of net income, income tax expense, and other adjustments.

In a partnership, the equity is called partners' capital, which is measured by capital contributions by partners (partnerships) and net income and decreased when there is a net loss or when partners withdraw capital (drawings).

FORMULA: Ending Capital = Beginning Capital + Net Income (or - Net Loss) - Drawings

EX: If the beginning capital is \$100,000, net income for the year is \$200,000 with no new investments, and the owners draw out \$200,000, then the ending capital will be \$200,000 (i.e., \$100,000 + \$200,000 - \$200,000).

Income Statement & Retained Earnings

The income statement (income statement) is a financial statement that shows the net income or net loss. Companies are allowed to use the sale of goods as evidence to calculate net income. Net income represents the amount of resources the entity used to run the business. If the resources are greater than the expenses, then the result of the formula is a positive number (net income). If the expenses are greater than the resources, then the result of the formula is a negative number (net loss). The income statement also forms the backbone of income, statement of earnings, statement of operations, or the profit and loss statement (P&L) consists the following formula:

FORMULA: Net Income (or Net Loss) = Revenues - Expenses

Net income per the net income of a business, net sales (total from current statements given to customers) for various reasons.

FORMULA: Net Sales = Gross Sales - Sales Discounts - Credit Card Discounts - Sales Returns and Allowances

EX: Gross Sales = Total sales for a period before subtracting discounts.

Net Income = Expenses given income of early payment.

Credit Card Discounts = The amount charged by the credit card company to a % of sale amount.

Sales Returns and Allowances = A reduction of sales amount for returns or allowances for unsatisfactory goods.

EX: If gross sales are \$1,000,000 with discounts of \$100,000 granted for early payment and costs of \$200,000, then the net sales would be \$800,000 (i.e., \$1,000,000 - \$100,000 - \$200,000).

Net income is an important concept, as it is the residual amount after expenses for the assets and stockholders, with corporations, net income available to common stockholders is known as net income, as it gives a more refined, accurate picture of profitability.

FORMULA: Income Available to Common Stockholders = Net Income - Dividends or Preferred Stock for the Current Period

Income statements can be prepared in various formats, and popular format is the traditional income statement, which starts the income from operations and the net income for a particular period of time arranged as follows:

Net Sales
Cost of Goods Sold
Gross Margin
Operating Expenses
Net Operating Income
Nonoperating Revenues and/or Expenses (Net Loss or Net Income)
Income Before Income Taxes
Income Taxes
Net Income

The calculation of net income is really the result of several formulas, such as gross margin, net operating income, and income before taxes:

FORMULA: Gross Margin = Net Sales - Cost of Goods Sold

Net Operating Income = Gross Margin - Operating Expenses

Income Before Income Taxes = Net Operating Income + Nonoperating Revenues and/or Gains - Nonoperating Expenses and/or Losses

Net Income = Income Before Income Taxes - Income Taxes

EX: If net sales are \$750,000 and the cost of goods sold is \$250,000, then the gross margin is \$500,000 (i.e., \$750,000 - \$250,000). Additionally, what cost would the operating expenses in order to break even at production net income?

Gross margin is also called gross profit.

Net income statement can also be prepared in the contribution margin format, which is useful to managers for decision-making purposes.

FORMULA: Net Income = Contribution Margin - Variable Expenses = Contribution Margin - Fixed Expenses

The contribution margin format can also be used to measure a company's income statement.

FORMULA: Segment Revenue (or Sales) - Segment Variable Expenses = Contribution Margin - Segment Fixed Expenses = Segment Margin

Breakable fixed expenses are those expenses that not only can break but also can be associated with the expense with a high degree of accuracy.

A segment can be a division, product, customer, or territory, that is, any part of a business that which management wants to track profitability.

Since a company's operations program is its primary program, that must include various costs, it issues a statement of activities (statement of the income statement) issued by a for-profit business, which shows the ending balance of the assets.

FORMULA: Ending Net Assets = Revenues - Expenses + Beginning Net Assets

EX: Revenues - Each dollar in contributions by donors, contributing their program fees, money raised from fundraising events, grants, and investments (assets).

Expenses - Program expenses, which are the resources directly incurred by the nonprofit in carrying out its program and supporting activities expenses, including management general and fundraising expenses.

Nonprofits and governmental agencies produce a form of accounting that is a bit different than GAAP, referred to as fund report in the form of budgetary accounting, the budget is the government report for a nonprofit and governmental agency.

Earnings per share (EPS) is the amount of current period earnings that can be associated with a single share of a corporation's common stock, or entity with a single capital structure (only common stock) representing the basic earnings per share (EPS).

FORMULA: EPS = $\frac{\text{Income Available to Common Stockholders}}{\text{Weighted-Average Number of Common Shares Outstanding}}$
