

Zoom

Zooming gives the impression of moving closer or further away from the subject. It can be used to magnify a focus point in the frame, but other moves such as a dolly, are a more natural way to show movement.

Truck

Similar to dollying, trucking involves a moving a track-mounted camera along a fixed horizontal path. Often used to follow characters in action. Get rid of jerky camera movements with a fluid motion track.

Medium shot

Also known as the 1/2 shot, the medium shot typically shows the subject from the knees up. It allows the viewer to see the background environment and the character's gestures, while still being close enough to capture their emotions.

Down shot

A down shot, in contrast to an up shot, is taken from above the eye-level of the subject and can make the subject seem vulnerable or powerless.

Pan

Panning moves the camera horizontally on a central axis. The camera remains stationary, but the direction that it faces changes. Can be used to follow a moving character or to fit more into a frame.

Pedestal

A pedestal involves moving the camera upwards or downwards in relation to a subject. It's different from tilting in that the entire camera ascends or descends, rather than camera angle alone.

Close shot

In a close shot, the subject's head and/or face takes up most of the frame. This allows their reactions and emotions to dictate the scene. The subject is the focus which helps build a connection with the audience.

Over the shoulder

Taken from behind the shoulder of another character, an OTS typically frames the subject in a medium or close shot. It is effective in group conversation scenes and establishes which characters are speaking to each other.

Tilt

A tilt is a vertical pan movement. A slow upwards tilt can be very effective in making a subject appear bigger or more significant while a downwards tilt has the opposite effect.

Establishing shot

Establishing shots build ambiance and show the context of what's to come. Often a long shot, the establishing shot indicates where (and sometimes when) the scene is taking place.

Extreme close shot

An extreme close shot is so close that only one detail, such as a person's eyes or mouth, can be seen. Because of the unusually close nature of the shot, it should be used sparingly. An ECS can be incredibly effective for adding drama.

Two shot

A two shot presents two characters together within the same frame. It's a natural means of introducing both people and can be used to shed light on their relationship with one another.

Dolly

In a dolly shot a track-mounted camera moves towards or away from the subject. Unlike a zoom, the world around the subject moves with the camera. A dolly towards the subject creates intimacy.

Full shot

The full shot is just as the name implies and shows the entire body of the subject from head to toe. This shot tends to focus more on the character's movement rather than their state of mind.

Up shot

An up shot is taken from below eye-level creates the perception that the viewer is looking at them from a lower perspective. This type of shot can give the impression that the subject is powerful, heroic, or even dangerous.

Point of view shot

The point of view (POV) shot shows us what character sees in first-person. It allows the viewer to take on the perspective of the character and begin to understand their state of mind on a more personal level.

A visual guide to camera angles

Understanding the most important camera shots will help you make easy-to-read storyboards, and good storyboards lead to good films. Whether you're making a film, an animation, or something else entirely, these 16 camera moves and shot types will give your visual vocabulary a boost.
