**Continuous**

**Casting** Michael Vynnycky, 2019-07-30 Continuous casting is an industrial process whereby molten metal is solidified into a semi finished billet bloom or slab for subsequent rolling in finishing mills it is the most frequently used process to cast not only steel but also aluminium and copper alloys Since its widespread introduction for steel in the 1950s it has evolved to achieve improved yield quality productivity and cost efficiency It allows lower cost production of metal sections with better quality due to the inherently lower costs of continuous standardized production of a product as well as providing increased control over the process through automation Nevertheless challenges remain and new ones appear as ways are sought to minimize casting defects and to cast alloys that could originally only be cast via other means This Special Issue of the journal Metals consists of 14 research articles that cover many aspects of experimental work and theoretical modelling related to the ongoing development of continuous casting processes

*Introduction to Molecular Aerodynamics and Direct Simulation Monte Carlo Method* Gennaro Zuppari, 2025-04-15 This book is aimed at illustrating that the balance equations can be derived by a method that consider the fluid dynamic system as made up of a number of molecules The book shows that 1 Equilibrium non equilibrium is associated with the absence presence of gradients of velocity temperature and chemical species in the flow field 2 In equilibrium modelled by the Maxwell equation both the Euler and the state equations are obtained 3 In non equilibrium the equations of Newton Fourier and Fick are obtained Validity of these equations therefore of the Navier Stokes equations is linked to the condition that the shift from equilibrium quantified by a small perturbation of the Maxwell distribution has to be small 4 Considering a second order perturbation term in the

distribution function produces the Burnett equations Nowadays the solution of rarefied flow fields relies on Direct Simulation Monte Carlo method Four uses of the DS2V and DS3V codes have been carried out **OpenFOAM®** J. Miguel Nóbrega, Hrvoje Jasak, 2019-01-24 This book contains selected papers of the 11th OpenFOAM Workshop that was held in Guimarães Portugal June 26-30 2016 The 11th OpenFOAM Workshop had more than 140 technical scientific presentations and 30 courses and was attended by circa 300 individuals representing 180 institutions and 30 countries from all continents The OpenFOAM Workshop provided a forum for researchers industrial users software developers consultants and academics working with OpenFOAM technology The central part of the Workshop was the two day conference where presentations and posters on industrial applications and academic research were shown OpenFOAM Open Source Field Operation and Manipulation is a free open source computational toolbox that has a larger user base across most areas of engineering and science from both commercial and academic organizations As a technology OpenFOAM provides an extensive range of features to solve anything from complex fluid flows involving chemical reactions turbulence and heat transfer to solid dynamics and electromagnetics among several others Additionally the OpenFOAM technology offers complete freedom to customize and extend its functionalities
