essential in the daily humn life of modern society despite the misconception about the real need for chemical production

everyone enjoys the benefit of the chemical progress. However, the chemical industry generates a large variety of products including i) basic chemicals e.g. polymers, petrochemicals and basic inorganics; ii) specialty chemicals for crop protection, paints, inks, colorants, textiles, paper and engineering; and iii) consumer chemicals including detergents, soaps, etc. For these reasons, chemists in both academia and industry are challenged with developing green and sustainable chemical production toward the full recycling of feedstocks and waste. Aiming to improve the intensification of the process, chemists have established chemical reactions based on catalysis as well as alternative technologies such as continuous flow. The aim of this book is to cover promising recent research and novel trends in the field of novel catalytic reactions: homogeneous, heterogeneous, and enzymatic, as well as their combinations in continuous flow conditions. A collection of recent contributions for conversion of starting material originated from petroleum resources or biomass into highly added value chemicals are reported.

Advances in Air Conditioning and Refrigeration Maddali Ramgopal, Sachindra Kumar Rout, Sunil Kr Sarangi, 2020-10-10
