Economy of Belarus , 2007 **Beyond Imagined Uniqueness** William Glass, 2010-08-11 *Beyond Imagined Uniqueness Nationalisms in Comparative Perspectives* is a collection of essays from a variety of disciplines and theoretical perspectives that explore the contentious issue of nationalism in historical and contemporary settings They adopt an interdisciplinary approach to the topic of nationalism and its permutations and modes of expression The unspoken context of these essays is the trends subsumed under the processes of globalization Though the world may be becoming more integrated economically these essays suggest social cultural and political forces historically rooted keep the nation and national identity alive and well The comparative perspectives offered by the essays appear in two ways one set is the explicit comparisons of nations made by several authors within their essays and between the essays themselves when the authors focus on developments within a single nation A second and indeed more thought provoking set of comparisons come from the way the essays address nationalism in disparate scholarly approaches that include visual culture history sociology and literature Moreover while traditional themes in the study of nationalism are not ignored these essays expand the discussion with case studies of

nationalism in Turkey Asia and Eastern Europe Even when nationalism is considered in those areas that have been the central focus of nationalism studies Western Europe and the USA the authors bring unique voices to the conversation as in the use of portraiture as a vehicle of nationalism in Cold War America or children s literature shaping a Swedish American identity or in the idea of a covenant as a source of Dutch nationalism or the role of minority languages in West European societies Section One of this volume contains essays that examine the terrain of the national imaginary through language monuments and visual culture Several of the essays in this traverse the cultural sites of representation and commemoration of the nation looking carefully at the politics of memory in places material objects and texts Section Two provides more individual case studies of nations though many of these essays engage significant regional and international tensions especially in a post Cold War world that has often influenced the internal dynamics of nation building Section Three moves the focus away from the nation to immigrant communities especially those in the United States Canada and the Caribbean Diasporas throughout the world have challenged many theories about the nation as crossing borders becomes the norm rather the exception

Handbook of Climate Change and Biodiversity Walter Leal Filho,Jelena Barbir,Richard Preziosi,2018-08-28 This book comprehensively describes essential research and projects on climate change and biodiversity Moreover it includes contributions on how to promote the climate agenda and biodiversity conservation at the local level Climate change as a whole and global warming in particular are known to have a negative impact on biodiversity in three main ways Firstly increases in temperatures are detrimental to a number of organisms especially those in sensitive habitats such as coral reefs and rainforests Secondly the pressures posed by a changing climate may lead to sets of responses in areas as varied as phenology range and physiology of living organisms often leading to changes in their lifecycles especially but not only in reproduction losses in productivity or even death In some cases the very survival of very sensitive species may be endangered Thirdly the impacts of climate change on biodiversity will be felt in the short term with regard to some species and ecosystems but also in the medium and long term in many biomes Indeed if left unchecked some of these impacts may be irreversible Many individual governments financial institutes and international donors are currently spending billions of

dollars on projects addressing climate change and biodiversity but with little coordination Quite often the emphasis is on adaptation efforts with little emphasis on the connections between physio ecological changes and the lifecycles and metabolisms of fauna and flora or the influence of poor governance on biodiversity As such there is a recognized need to not only better understand the impacts of climate change on biodiversity but to also identify test and implement measures aimed at managing the many risks that climate change poses to fauna flora and micro organisms In particular the question of how to restore and protect ecosystems from the impact of climate change also has to be urgently addressed This book was written to address this need The respective papers explore matters related to the use of an ecosystem based approach to increase local adaptation capacity consider the significance of a protected areas network in preserving biodiversity in a changing northern European climate and assess the impacts of climate change on specific species including wild terrestrial animals The book also presents a variety of case studies such as the Yellowstone to Yukon Conservation Initiative the effects of climate change on the biodiversity of Aleppo pine forest in Senalba Algeria climate change and biodiversity response in the Niger Delta region and the effects of forest fires on the biodiversity and the soil characteristics of tropical peatlands in Indonesia This is a truly interdisciplinary publication and will benefit all scholars social movements practitioners and members of governmental agencies engaged in research and or executing projects on climate change and biodiversity around the world
