applications and technologies Today the volume velocity and variety of data are increasing rapidly across a range of fields including Internet search healthcare finance social media wireless devices and cybersecurity Indeed these data are growing at a rate beyond our capacity to analyze them The tools including spreadsheets databases matrices and graphs developed to address this challenge all reflect the need to store and operate on data as whole sets rather than as individual elements This book presents the common mathematical foundations of these data sets that apply across many applications and technologies Associative arrays unify and simplify data allowing readers to look past the differences among the various tools and leverage their mathematical similarities in order to solve the hardest big data challenges The book first introduces the concept of the associative array in practical terms presents the associative array manipulation system D4M Dynamic Distributed Dimensional Data Model and describes the application of associative arrays to graph analysis and machine learning It provides a mathematically rigorous definition of associative arrays and describes the properties of associative arrays that arise from this definition Finally the book shows how concepts of linearity can be extended to encompass associative arrays Mathematics of Big Data can be used as a textbook or reference by engineers scientists mathematicians computer scientists and software engineers who analyze big data **Lecture Notes in Real-Time Intelligent Systems** Jolanta

Mizera-Pietraszko,Pit Pichappan,Lahby Mohamed,2018-05-14 The second volume of the book series highlights works presented at the 2nd International Conference on Real Time Intelligent Systems held in Casablanca on October 18 20 2017 The book offers a comprehensive practical review of the state of the art in designing and implementing real time intelligent computing for the areas within the conference s scope such as robotics intelligent alert systems IoT remote access control multi agent systems networking mobile smart systems crowdsourcing broadband systems cloud computing streaming data and many other applications Research in real time computing supports decision making in dynamic environments Some examples include ABS FBW flight control automatic air conditioning etc Intelligent computing relies heavily on artificial intelligence AI to make computers act for humans The authors are confident that the solutions discussed in this book will provide a unique source of information and inspiration for researchers working in AI distributed coding algorithms or smart services and platforms and for IT professionals who can integrate the proposed methods into their practice **Agrindex** ,1995 Accumulo Michael Wall.
