Aircraft Design Ajoy Kumar Kundu, 2010-04-12 *Aircraft Design* explores fixed winged aircraft design at the conceptual phase of a project. Designing an aircraft is a complex multifaceted process embracing many technical challenges in a multidisciplinary environment. By definition the topic requires intelligent use of aerodynamic knowledge to configure aircraft geometry suited specifically to the customer's demands. It involves estimating aircraft weight and drag and computing the available thrust from the engine. The methodology shown here includes formal sizing of the aircraft engine matching and substantiating performance to comply with the customer's demands and government regulatory standards. Associated topics include safety issues, environmental issues, material choice, structural layout, understanding flight deck avionics and systems for both civilian and military aircraft. Cost estimation and manufacturing considerations are also discussed. The chapters are arranged to optimize understanding of industrial approaches to aircraft design methodology. Example exercises from the author's industrial experience dealing with a typical aircraft design are included.

Introduction to Maintenance, Repair and Overhaul of Aircraft, Engines and Components Shevantha Weerasekera, 2020-12-29 *Introduction to Maintenance Repair and Overhaul of Aircraft Engines and Components* brings together the basic aspects of a fundamentally important part of the aerospace industry, the one that supports the global technical efforts to keep passenger and cargo planes flying reliably and safely. Over time aircraft components and structural parts are subject to environmental effects such as corrosion and other types of material deterioration, wear and fatigue. Such parts could fail in service and affect the safe operation of the aircraft if the degradation were not detected and addressed in time. Regular planned maintenance supports the current and future value of the aircraft by minimizing the physical decline of the aircraft and engines throughout its life. *Introduction to Maintenance Repair and Overhaul of Aircraft Engines and Components* was written by the industry veteran Shevantha K Weerasekera, an aerospace engineer with 20 years of aircraft maintenance experience who currently leads the engineering team of a major technical enterprise in the field.

Proceedings of the First Symposium on Aviation Maintenance and Management-Volume I Jinsong Wang, 2014-03-18 *Proceedings of the First Symposium on Aviation Maintenance and Management* collects selected papers from the conference of ISAMM 2013 in China held in Xi'an on November 25-28, 2013. The book presents state-of-the-art studies on the aviation maintenance test, fault diagnosis and prognosis for the aircraft electronic and electrical systems. The selected works can help promote the development of the maintenance and test technology for the aircraft complex systems. Researchers and engineers in the fields of electrical engineering and aerospace engineering can benefit from the book. Jinsong Wang is a professor at School of Mechanical and Electronic Engineering of Northwestern Polytechnical University, China.
