The Axon Guide for Electrophysiology & Biophysics, 1993 **The Journal of Neuroscience**, 1995 *Cytokines as Players of Neuronal Plasticity and Sensitivity to Environment in Healthy and Pathological Brain* Silvia Alboni, Laura Maggi, 2016-03-18 It is now accepted that immune molecules are not only present within the brain during pathology but they exert physiological functions in the healthy brain as well Increasing evidence points to a neuro modulatory role of cytokines and chemokines CHEMOtactic cytoKINES in basal transmission and plasticity processes where signaling between peri synaptic astrocytes microglia and neurons plays an important role Nevertheless the exact mechanisms as to how cytokines and in particular chemokines participate in the molecular and cellular processes thought to subserve memory formation plasticity processes and responsiveness to environmental stimuli remain to be clarified Interestingly in in vitro preparations molecules like TNF interleukin IL 1 IL 6 CX3CL1 CXCL12 CCL2 and CCL3 are implicated in synaptic formation and scaling in modulation of glutamatergic transmission in plasticity and neurogenesis in particular in the hippocampus The hippocampus is an extremely plastic structure one of the main neurogenic niches in the adult brain that exhibits a marked sensibility to environmental stimuli Indeed exposure of mice to environmental enrichment EE modifies learning and memory abilities increasing neurogenesis and neuronal plasticity whether exposure to severe stressful experiences diminishes neurotrophic support impairs neurogenesis plasticity and cognition In the hippocampus cytokines play a key role in mediating both positive as well as negative effects of the environment affecting neuronal plasticity also in stress related pathologies such as depression It has been reported that mice lacking type 1 receptor for IL 1 display impaired hippocampal memory and LTP that are restored by EE moreover negative effects on neuronal plasticity and thus behavior induced by stress exposure can be prevented by blocking IL 1 activity In addition mice lacking IL 6 have improved cognitive functions whereas the absence of microglia driven CX3CR1 signaling increases hippocampal plasticity and spatial memory occluding the potentiating effects of EE However the factors mediating the effect of environmental stimuli on behavior and plasticity has been only partially identified Interestingly it has been suggested that chemokines can play a key role in the flexibility of hippocampal structure and may modulate neuronal signaling during behavior The question is how cytokines may translate environmental stimuli in plasticity and behavioral changes This research topic is proposed to explore the role of cytokines and more in particular chemokines in the modulation of neuronal activity as a fundamental step for the correct brain wiring function and susceptibility to environment We encourage the submission of original research reports review articles commentaries perspectives or short communications in the following but not limited to topics Role of cytokines and chemokines in neuronal plasticity Immune molecules and responsiveness to environment Role of chemokine in the flexibility of hippocampal structure
