Strategies and Recommendations Based on ASHRAE Advanced Energy Design Guide 50 Percent Savings to Achieve Net Zero Energy for K-12 School Buildings in the State of Florida Ruthwik Reddy Pasunuru, 2014 Net Zero energy is a topic that is trending in the construction industry. A sector of this Net Zero movement garnering attention is K-12 public school construction. Compared to other buildings, schools can achieve Net Zero Energy status more readily. Few governments have established initiatives to incorporate and implement Net Zero strategies in school design and construction. There are already 20 Net Zero schools in the US, and the number is increasing rapidly. The state of Florida has many energy-efficient schools, but a Net Zero energy school has not been achieved in this part of the country. In this study, we discuss energy-efficient design strategies for the schools and areas to be targeted in order to reduce the energy consumption based on ASHRAE's Advanced Energy Design Guide Achieving 50% energy savings. Three case studies of popular Net Zero Schools in the country are also included. Energy performance of Alachua County's Meadowbrook Elementary School, K-5, which can achieve Net Zero Energy status with some proven and effective practices, is also discussed. Further recommendations could eliminate the gap between design and use with the help of energy modelling and simulation. Renewable energy production is provided by taking advantage of the Florida climate zone. The suggestions reviewed and applied in this paper will establish guidelines to all the prospective Net Zero energy schools in general and the Florida-based schools in particular.
