Applied Logistic Regression D.W. Hosmer, S.

Lemeshow, 1989 Applied logistic regression is the first introductory work devoted to this useful statistical technique. Emphasis is on the use of logistic regression in methods for modeling the relationship between a dichotomous outcome variable and a set of covariates. The model is developed by approaching logistic regression via a linear regression point of view rather than by means of contingency tables. Considerable importance is placed on effective modeling strategies and the interpretation and presentation of results.
