A Study Of Concepts Representation And Mind:

A Study of Concepts Christopher Peacocke, 1992 Philosophers from Hume Kant and Wittgenstein to the recent realists and antirealists have sought to answer the question What are concepts This book provides a detailed systematic and accessible introduction to an original philosophical theory of concepts that Christopher Peacocke has developed in recent years to explain facts about the nature of thought including its systematic character its relations to truth and reference and its normative dimension Particular concepts are also treated within the general framework perceptual concepts logical concepts and the concept of belief are discussed in detail The general theory is further applied in answering the question of how the ontology of concepts can be of use in classifying mental states and in discussing the proper relation between philosophical and psychological theories of concepts Finally the theory of concepts is used to motivate a nonverificationist theory of the limits of intelligible thought Peacocke treats content as broad rather than narrow and his account is nonreductive and non Quinean Yet Peacocke also argues for an interactive relationship between philosophical and psychological theories of concepts and he plots many connections with work in cognitive psychology Ontology, Epistemology, and Teleology for Modeling and Simulation Andreas Tolk, 2012-08-10 In this book internationally recognized experts in philosophy of science computer science and modeling and simulation are contributing to the discussion on how ontology epistemology and teleology will contribute to enable the next generation of intelligent modeling and simulation applications It is well understood that a simulation can provide the technical means to display the behavior of a system over time including following observed trends to predict future possible states but how reliable and trustworthy are such predictions The questions about what we can know ontology how we gain new knowledge epistemology and what we do with this knowledge teleology are therefore illuminated from these very different perspectives as each experts uses a different facet to look at these challenges The result of bringing these perspectives into one book is a challenging compendium that gives room for a spectrum of challenges from general philosophy questions such as can we use modeling and simulation and other computational means at all to discover new knowledge down to computational methods to improve semantic interoperability between systems or methods addressing how to apply the recent insights of service oriented approaches to support distributed artificial intelligence As such this book has been compiled as an entry point to new domains for students scholars and practitioners and to raise the curiosity in them to learn more to fully address the topics of ontology epistemology and teleology from philosophical computational and conceptual viewpoints Regarding the Mind, Naturally Marcin Milkowski, Konrad Talmont-Kaminski, 2014-08-11 Naturalism is currently the most vibrantly developing approach to philosophy with naturalised methodologies being applied across all the philosophical disciplines One of the areas naturalism has been focussing upon is the mind traditionally viewed as a topic hard to reconcile with the naturalistic worldview A number of questions have been pursued in this context What is the place of the mind in the world How should we study the

mind as a natural phenomenon What is the significance of cognitive science research for philosophical debates In this book philosophical questions about the mind are asked in the context of recent developments in cognitive science evolutionary theory psychology and the project of naturalisation Much of the focus is upon what we have learned by studying natural mental mechanisms as well as designing artificial ones In the case of natural mental mechanisms this includes consideration of such issues as the significance of deficits in these mechanisms for psychiatry The significance of the evolutionary context for mental mechanisms as well as questions regarding rationality and wisdom is also explored Mechanistic and functional models of the mind are used to throw new light on discussions regarding issues of explanation reduction and the realisation of mental phenomena Finally naturalistic approaches are used to look anew at such traditional philosophical issues as the correspondence of mind to world and presuppositions of scientific research
