Despeckle Filtering for Ultrasound Imaging and Video, Volume II Christos P. Loizou,Constantinos S.

Pattichis,2022-06-01 In ultrasound imaging and video visual perception is hindered by speckle multiplicative noise that degrades the quality Noise reduction is therefore essential for improving the visual observation quality or as a pre processing step for further automated analysis such as image video segmentation texture analysis and encoding in ultrasound imaging and video The goal of the first book book 1 of 2 books was to introduce the problem of speckle in ultrasound image and video as well as the theoretical background algorithmic steps and the MatlabTM for the following group of despeckle filters linear despeckle filtering non linear despeckle filtering diffusion despeckle filtering and wavelet despeckle filtering The goal of this book book 2 of 2 books is to demonstrate the use of a comparative evaluation framework based on these despeckle filters introduced on book 1 on cardiovascular ultrasound image and video processing and analysis More specifically the despeckle filtering evaluation framework is based on texture analysis image quality evaluation metrics and visual evaluation by experts This framework is applied in cardiovascular ultrasound image video processing on the tasks of segmentation and structural measurements texture analysis for differentiating between two classes i e normal vs disease and for efficient encoding for mobile applications It is shown that despeckle noise reduction improved segmentation and measurement of tissue structure investigated increased the texture feature distance between normal and abnormal tissue improved image video quality evaluation and perception and produced significantly lower bitrates in video encoding Furthermore in order to facilitate further applications we have developed in MATLABTM two different toolboxes that integrate image IDF and video VDF despeckle filtering texture analysis and image and video quality evaluation metrics The code for these toolsets is open source and these are available to download complementary to the two monographs

Despeckle Filtering for Ultrasound Imaging and Video Christos P. Loizou,Constantinos S. Pattichis,2015-08-01 In ultrasound imaging and video visual perception is hindered by speckle multiplicative noise that degrades the quality Noise reduction is therefore essential for improving the visual observation quality or as a pre processing step for further automated analysis such as image video segmentation texture analysis and encoding in ultrasound imaging and video The goal of the first book book 1 of 2 books was to introduce the problem of speckle in ultrasound image and video as well as the theoretical background algorithmic steps and the MatlabTM for the following group of despeckle filters linear despeckle filtering non linear despeckle filtering diffusion despeckle filtering and wavelet despeckle filtering The goal of this book book 2 of 2 books is to demonstrate the use of a comparative evaluation framework based on these despeckle filters introduced on book 1 on cardiovascular ultrasound image and video processing and analysis More specifically the despeckle filtering evaluation framework is based on texture analysis image quality evaluation metrics and visual evaluation by experts This framework is applied in cardiovascular ultrasound image video processing on the tasks of segmentation and structural measurements texture analysis for

differentiating between two classes i.e. normal vs disease and for efficient encoding for mobile applications. It is shown that despeckle noise reduction improved segmentation and measurement of tissue structure investigated. Increased texture feature distance between normal and abnormal tissue improved image video quality evaluation and perception and produced significantly lower bitrates in video encoding. Furthermore, in order to facilitate further applications, we have developed in MATLAB™ two different toolboxes that integrate image IDF and video VDF despeckle filtering, texture analysis and image and video quality evaluation metrics. The code for these toolsets is open source and these are available to download.

complementary to the two monographs **Advances in Diagnostic and Therapeutic Ultrasound Imaging** Jasjit S. Suri, 2008. This groundbreaking resource offers you exclusive coverage of the latest techniques in diagnostic and therapeutic 3D ultrasound imaging instrumentation and techniques. Providing a solid overview of potential applications in clinical practice, you find need to know details on major diseases including vascular diseases, breast cancer, cardiac abnormalities and prostate cancer. Ultrasound Imaging Joao Miguel Sanches, Andrew F. Laine, Jasjit S. Suri, 2011-12-15. Diagnostic and Therapeutic Ultrasound has recently taken an explosive growth for better, safer, economic, mobile and high quality healthcare. This technology is very appealing for medical applications because it is non-ionizing, non-invasive and it is available in most of the medical and clinical facilities. Its low cost when compared with other medical image modalities makes it one of the preferred tools for medical monitoring, follow-up and diagnosis. Besides the traditional fields of Cardiology and Obstetrics, where it is extensively used for long time, it has become also very useful in the diagnosis of diseases of the prostate, liver and coronaries and carotids, atherosclerosis. However, Ultrasound images present poor quality, very low signal to noise ratio and a lot of artifacts. The extraction of useful information from Ultrasound data for diagnosis is a challenge task that makes this medical image modality a very active field of research. The difficulties are being overcome and novel and advanced methods are being proposed for detection, characterization and segmentation of abnormalities in several organs. In fact, Ultrasound application range is vast, covering almost all organs of the human body, including the brain, where Transcranial Doppler Ultrasound is very important to assess the brain vasculature. This book presents some of the recent advances in Ultrasound imaging technology covering several organs and techniques in a Biomedical Engineering (BME) perspective. The focus of the book is in the algorithms, methodologies and systems developed by multidisciplinary research teams of engineers and physicians for Computer Aided Diagnosis (CAD) purposes. Cardiovascular and Cancer, the most common life-threatening diseases in western countries, are two of the most important topics focused in the book. However, other advanced issues are also presented, such as Intravascular Ultrasound (3D US) and Ultrasound in Computer Aided Surgery (CAS). Some chapters are direct contributions from medical research groups where Ultrasound has also received great attention in the last decade. By this new techniques based on Ultrasound were introduced in the clinical practice for diagnosis and therapeutics, mainly in hospital facilities. Ultrasound and Carotid Bifurcation Atherosclerosis Andrew Nicolaides, Kirk W. Beach, Efthymoulos

Kyriacou,Constantinos S. Pattichis,2011-11-24 Ultrasound and Carotid Bifurcation Atherosclerosis provides a comprehensive overview of the most recent advancements in instrumentation imaging techniques including the use of contrast enhancement agents plaque image analysis and its automation elastography and plaque motion analysis also the use of ultrasonic and other biomarkers in the detection of the high risk cardiovascular individual Finally it deals with the application of IVUS TCD and carotid plaque characterization in clinical practice and in stroke risk stratification Ultrasound and Carotid Bifurcation Atherosclerosis is intended for all those working in the field of atherosclerosis ultrasound imaging and cardiovascular risk including the clinician the vascular ultrasonographer the epidemiologist the molecular biologist the biomedical engineer and the informatics scientist Furthermore this book bridges the gap between the researcher and the clinician who is keen to incorporate the latest results of research to his daily practice *Transfontanellar Doppler Imaging in Neonates* A.

Couture,C. Veyrac,2012-12-06 Transfontanellar Doppler imaging was until recently an emerging new diagnostic modality that was not widely used in clinical practice Dr A Couture and Dr C Veyrac have pioneered and incessantly developed the tech and neonatal brain scanning until it has now been matured into an nique of prenatal indispensable tool for the correct management of infants Building upon the technical progress in the manufacturing of scanning probes and ultrasonic equipment the authors have been able to accumulate a unique and exceptional body of knowledge on fetal and neonatal brain scanning Their book provides exquisite information not only on the normal neonatal brain but also on the various pathological conditions and malformations involving the fetal and neonatal brain as provided by ultrasound examination The book contains numerous illustrative examples selected from the outstanding personal files of the authors Transfontanellar Doppler imaging because of its great impact on the management of neonates suspected of brain abnormalities should be available to all pediatric and general radiologists involved in brain scanning in the pediatric age group They and also neurologists and neurosurgeons will find this volume a unique source of information and knowledge I congratulate the editors on their outstanding performance and I wish this volume great success within the medical community Leuven

ALBERT L BAERT Preface Alain Couture belongs to the breed of pioneers This requires several unusual traits originality tenacity and vision and of course hard work **Clinical Application of 3D Sonography** S. Kupesic,A. Kurjak,2000-09-15

In recent years three dimensional ultrasound has become a valuable medical imaging modality This clinical textbook covers the full range of modern clinical applications of three dimensional sonography in obstetrics and gynecology It explains the methodology of three dimensional ultrasound and power Doppler and provides detailed how to information on diagnosis and assessment across the full range of clinical applications in obstetrics and gynecology *Experimental Biology and Medicine*
