Composite Solutions for Ballistics Yasir Nawab, S.M. Sapuan, Khubab Shaker, 2021-08-05 Academic researchers who are working on the development of composite materials for ballistic protection need a deeper understanding on the theory of material behavior during ballistic impact Those working in industry also need to select proper composite constituents to achieve their desired characteristics to make functional products Composite Solutions for Ballistics covers the different aspects of ballistic

protection its different levels and the materials and structures used for this purpose The emphasis in the book is on the application and use of composite materials for ballistic protection The chapters provide detailed information on the various types of impact events and the complexity of materials to respond to those events The characteristics of ballistic composites and modelling and simulation results will enable the reader to better understand impact mechanisms according to the theory of dynamic material behavior A complete description of testing conditions is also given that includes sensors and high speed devices to monitor ballistic events The book includes detailed approaches and schemes that can be implemented in academic research into solutions for ballistic protection in both theoretical and experimental fields to find solutions for existing and next generation threats The book will be an essential reference resource for materials scientists and engineers and academic and industrial researchers working in composite materials and textiles for ballistic protection as well as postgraduate students on materials science textiles and mechanical engineering courses Discusses the fundamentals of impact response mechanisms and related solutions covering advantages and disadvantages for both existing and next generation applications Includes various methods for evaluation of ballistic constituents according to economic and environmental criteria types of green ballistics are considered to enhance sustainable production of applications as well as hybrid composites from natural wastes Discusses selection methodologies for ballistic applications and detailed information on the use of textiles for reinforcement fabrication

Terminal Ballistics Zvi Rosenberg, Erez Dekel, 2020-06-01 This book comprehensively discusses essential aspects of terminal ballistics combining experimental data numerical simulations and analytical modeling This new 3rd edition reflects a number of recent advances in materials science such as the use of polyurea layers on metallic plates in order to improve their ballistics In addition more data and analyses are now available on dwell and interface defeat in ceramic tiles coated with polymers and are presented here Lastly the new edition includes new results numerical and empirical concerning the DIF issue in brittle solids as well as the upturn phenomenon in the stress strain curves of ductile solids The author also added a new analysis of concrete penetration experiments which accounts for the scaling issue in this field This is a new and important addition which we are happy to announce They also added some new insights into the interaction of EEP s and FSP projectiles with metallic plates Throughout the book the authors demonstrate the advantages of the simulation approach in terms of understanding the basic physics behind the phenomena investigated making it a must read for all professionals who need to understand terminal ballistics
