The Politics of the First World War Scott Wolford, 2019-02-21 This analytical history of World War I offers a rigorous yet accessible training in game theory and a survey of modern political science research

The Politics of Military Coalitions Scott Wolford, 2015-09-03 Military coalitions are ubiquitous The United States builds them regularly yet they are associated with the largest most destructive and consequential wars in history When do states build them and what partners do they choose Are coalitions a recipe for war or can they facilitate peace Finally when do coalitions affect the expansion of conflict beyond its original participants The Politics of Military Coalitions introduces newly collected data designed to answer these very questions showing that coalitions expensive to build but attractive from a military standpoint are very often more if sometimes less than the sum of their parts at times encouraging war while discouraging it at others at times touching off wider wars while at others keeping their targets isolated The combination of new data new formal theories and new quantitative analysis will be of interest to scholars students and policymakers alike

Abstraction in Experimental Design Ryan Brutger, Joshua D. Kertzer, Jonathan Renshon, Chagai M. Weiss, 2022-10-27 Political scientists designing experiments often face the question of how abstract or detailed their experimental stimuli should be Typically this question is framed in terms of tradeoffs relating to experimental control and generalizability the more context introduced into studies the less control and the more difficulty generalizing the results Yet we have reason to question this tradeoff and there is relatively little systematic evidence to rely on when calibrating the degree of abstraction in studies We make two contributions First we provide a theoretical framework which identifies and considers the consequences of three dimensions of abstraction in experimental design situational hypotheticality actor identity and contextual detail Second we field a range of survey experiments varying these levels of abstraction We find that situational hypotheticality does not substantively change experimental results but increased contextual detail dampens treatment effects and the salience of actor identities moderates results in specific situations

Great Powers and International Hierarchy Daniel

McCormack, 2018-08-16 Hierarchical relationships rules that structure both international and domestic politics are pervasive Yet we know little about how these relationships are constructed maintained and dismantled This book fills this lacuna through a two pronged research approach first it discusses how great power negotiations over international political settlements both respond to domestic politics within weak states and structure the specific forms that hierarchy takes Second it deduces three sets of hypotheses about hierarchy maintenance construction and collapse during the post war era By offering a coherent theoretical model of hierarchical politics within weaker states the author is able to answer a number of important questions including Why does the United States often ally with autocratic states even though its most enduring relationships are with democracies Why do autocratic hierarchical relationships require interstate coercion Why do some hierarchies end violently and others peacefully Why does hierarchical competition sometimes lead to interstate conflict and sometimes to civil conflict
