Architecture for Astronauts Sandra Häuplik-Meusburger, 2011-05-13 Living and working in extra terrestrial habitats means being potentially vulnerable to very harsh environmental social and psychological conditions With the stringent technical specifications for launch vehicles and transport into space a very tight framework for the creation of habitable space is set These constraints result in a very demanding partnership between the habitat and the inhabitant This book is the result of researching the interface between people space and objects in an extra terrestrial environment The evaluation of extra terrestrial habitats in comparison to the user s perspective leads to a new framework comparing these buildings from the viewpoint of human activity It can be used as reference or as conceptual framework for the purpose of evaluation It also summarizes relevant human related design directions The work is addressed to architects and designers as well as engineers

Space Architecture Neil Leach, 2015-01-12 Forty years on from the first moon landing architecture in Space is entering a new era Over the last decade there has been a fundamental shift in the Space industry from short term pioneering expeditions to long term planning for colonisation and new ventures such as Space tourism Architects are now involved in designing the interiors of long term habitable structures in Space such as the International Space Station researching advanced robotic fabrication technologies for building structures on the Moon and Mars envisioning new space yachts for the super rich and building new facilities such as the Virgin Galactic Spaceport America in New Mexico designed by Foster Partners Meanwhile the mystique of Space remains as alluring as ever as high profile designers and educators such as Greg Lynn are running design studios drawing upon ever more inventive computational design techniques This issue of AD features the most significant current projects underway and highlights key areas of research in Space such as energy materials manufacture and robotics It also looks at how this research and investment in new technologies might transfer to terrestrial design and construction Space architects Constance Adams Marc Cohen Ondrej Doule Sandra Häuplik Meusburger Scott Howe Brent Sherwood Madhu Thangavelu Andreas Vogler Robert Zubrin Architects Bevk Perovic Arhitekti Dekleva Gregoric Arhitekti Foster Partners Neil Leach Greg Lynn OFIS architects SADAR VUGA

Space Architecture Education

for Engineers and Architects Sandra Häuplik-Meusburger, Olga Bannova, 2016-03-30 This book considers two key educational tools for future generations of professionals with a space architecture background in the 21st century 1 introducing the discipline of space architecture into the space system engineering curricula and 2 developing space architecture as a distinct complete training curriculum Professionals educated this way will help shift focus from solely engineering driven transportation systems and sortie missions towards permanent off world human presence The architectural training teaches young professionals to operate at all scales from the overall picture down to the smallest details to provide directive intention not just analysis to design opportunities to address the relationship between human behavior and the built environment and to interact with many diverse fields and disciplines throughout the project lifecycle This book will benefit individuals and organizations responsible for planning transportation and habitat systems in space while also providing detailed information on work and design processes for architects and engineers **Yearbook on**

Space Policy 2010/2011 Peter Hulsroj, Spyros Pagkratis, Blandina Baranes, 2013-04-15 The Yearbook on Space Policy is the reference publication analysing space policy developments Each year it presents issues and trends in space policy and the space sector as a whole Its scope is global and its perspective is European The Yearbook also links space policy with other policy areas It highlights specific events and issues and provides useful insights data and information on space activities The Yearbook on Space Policy is edited by the European Space Policy Institute ESPI based in Vienna Austria It combines in house research and contributions of members of the European Space Policy Research and Academic Network ESPRAN coordinated by ESPI The Yearbook is designed for government decision makers and agencies industry professionals as well as the service sectors researchers and scientists and the interested public *Space Habitats and Habitability* Sandra

Häuplik-Meusburger, Sheryl Bishop, 2021-05-31 This book explores creative solutions to the unique challenges inherent in crafting livable spaces in extra terrestrial environments The goal is to foster a constructive dialogue between the researchers and planners of future space habitats The authors explore the diverse concepts of the term Habitability from the perspectives of the inhabitants as well as the planners and social sciences The book provides an overview of the evolution and advancements of designed living spaces for manned space craft as well as analogue research and simulation facilities in extreme environments on Earth It highlights how various current and future concepts of Habitability have been translated into design and which ones are still missing The main emphasis of this book is to identify the important factors that will provide for well being in our future space environments and promote creative solutions to achieving living spaces where humans can thrive Selected aspects are discussed from a socio spatial professional background and possible applications are illustrated Human factors and habitability design are important topics for all working and living spaces For space exploration they are vital While human factors and certain habitability issues have been integrated into the design process of manned spacecraft there is a crucial need to move from mere survivability to factors that support thriving As of today the risk of an

incompatible vehicle or habitat design has already been identified by NASA as recognized key risk to human health and performance in space Habitability and human factors will become even more important determinants for the design of future long term and commercial space facilities as larger and more diverse groups occupy off earth habitats The book will not only benefit individuals and organizations responsible for manned space missions and mission simulators but also provides relevant information to designers of terrestrial austere environments e g remote operational and research facilities hospitals prisons manufacturing In addition it presents general insights on the socio spatial relationship which is of interest to researchers of social sciences engineers and architects

Interplanetary Outpost Erik Seedhouse, 2012-02-02 Interplanetary Outpost follows the mission architecture template of NASA's plan for Human Outer Planet Exploration HOPE which envisions sending a crew to the moon Callisto to conduct exploration and sample return activities To realize such a mission the spacecraft will be the most complex interplanetary vehicle ever built representing the best technical efforts of several nations A wealth of new technologies will need to be developed including new propulsion systems hibernation strategies and revolutionary radiation shielding materials Step by step the book will describe how the mission architecture will evolve how crews will be selected and trained and what the mission will entail from launch to landing However the focus of Interplanetary Outpost is on the human element The extended duration logistical challenges radiation concerns communication lag times isolation and deleterious effects on the human body will conspire to not only significantly impair human performance but also affect the behavior of crewmembers This book addresses each of these issues in detail while still providing the reader with a background to the necessary elements comprising such a mission

Design of Supporting Systems for Life in Outer Space Annalisa Dominoni, 2020-11-07 This book is a rich source of information on design research and solutions for the support and development of space missions International experiences and researches are presented in order to cast light on the role of space design in improving living and working conditions in outer space and to highlight the particularities of the necessary design skills taking into account specific requirements and constraints The challenge facing designers is how to approach environmentally extreme conditions in such a way that they are transformed from limitations into opportunities The author has herself developed products that have been tested during on orbit experiments on the International Space Station Drawing on this unique experience and other case studies the author proposes a new design methodology for space and demonstrates how the discipline of design is able to generate innovation thanks to the strong capacity of visioning Ultimately this will lead to the development of further new equipment for astronauts that will facilitate space travel While the book is intended primarily for students and researchers it is also of interest for a broad readership attracted by space innovation and future scenarios

Building Habitats on the Moon Haym Benaroya, 2018-01-11 Designing a habitat for the lunar surface You will need to know more than structural engineering There are the effects of meteoroids radiation and low gravity Then there are the psychological and psychosocial aspects of living in close quarters in a dangerous environment far away from home All these must be considered when the habitat is sized materials specified and structure designed This book provides an overview of various concepts for lunar habitats and structural designs and characterizes the lunar environment the technical and the nontechnical The designs take into consideration psychological comfort structural strength against seismic and

thermal activity as well as internal pressurization and 1.6 g. Also discussed are micrometeoroid modeling risk and redundancy as well as probability and reliability with an introduction to analytical tools that can be useful in modeling uncertainties.
