Differential Equation Models Martin Braun, Courtney S. Coleman, Donald A. Drew, 2012-12-06 The purpose of this four volume series is to make available for college teachers and students samples of important and realistic applications of mathematics which can be covered in undergraduate programs The goal is to provide illustrations of how modern mathematics is actually employed to solve relevant contemporary problems Although these independent chapters were prepared primarily for teachers in the general mathematical sciences they should prove valuable to students teachers and research scientists in many of the fields of application as well Prerequisites for each chapter and suggestions for the teacher are provided Several of these chapters have been tested in a variety of classroom settings and all have undergone extensive peer review and revision Illustrations and exercises are included in most chapters Some units can be covered in one class whereas others provide sufficient material for a few weeks of class time Volume 1 contains 23 chapters and deals with differential equations and in the last four chapters problems leading to partial differential equations Applications are taken from medicine biology traffic systems and several other fields The 14 chapters in Volume 2 are devoted mostly to problems arising in political science but they also address questions appearing in sociology and ecology Topics covered include voting systems weighted voting proportional representation coalitional values and committees The 14 chapters in Volume 3 emphasize discrete mathematical methods such as those which arise in graph theory combinatorics and networks

Model-based Nonlinear Control of Aeroengines Jiqiang Wang, Weicun Zhang, Zhongzhi Hu, 2021-08-17 This book aims to develop systematic design methodologies to model based nonlinear control of aeroengines focusing on 1 modelling of aeroengine systems both component level and identification based models will be extensively studied and compared and 2 advanced nonlinear control designs set point control transient control and limit protection control approaches will all be investigated The model based design has been one of the pivotal technologies to advanced control and health management of propulsion systems It can fulfil advanced designs such as fault tolerant control engine modes control and direct thrust control As a consequence model based design has become an important research area in the field of aeroengines due to its theoretical interests and engineering significance One of the central issues in model based controls is the tackling of nonlinearities There are publications concerning with either nonlinear modelling or nonlinear controls yet they are scattered throughout the literature It is time to provide a comprehensive summary of model based nonlinear controls Consequently a series of important results are obtained and a systematic design methodology is developed which provides consistently enhanced performance over a large flight operational envelope and it is thus expected to provide useful guidance to practical engineering in aeroengine industry and research

Automation 2022: New Solutions and Technologies for Automation, Robotics and Measurement Techniques Roman Szewczyk, Cezary Zieliński, Małgorzata

Kaliczyńska,2022-04-15 This book presents the unique result of discussion among interdisciplinary specialists facing recent industrial and economic challenges It contains papers authored by both scientists and practitioners focused on an interdisciplinary approach to developing measuring techniques robotic and mechatronic systems industrial automation numerical modelling and simulation and application of artificial intelligence techniques required by the transformation leading to Industry 4 0 We strongly believe that the solutions and guidelines presented in this book will be useful to both researchers and engineers facing problems associated with developing cyber physical systems for global development
