Topology of Algebraic Varieties and Singularities José Ignacio Cogolludo-Agustín, Eriko Hironaka, 2011 This volume contains invited expository and research papers from the conference Topology of Algebraic Varieties in honour of Anatoly Libgober's 60th birthday held June 22-26 2009 in Jaca Spain

Continued Fractions: From Analytic Number Theory to Constructive Approximation Bruce C. Berndt, Fritz Gesztesy, 1999 This volume presents the contributions from the international conference held at the University of Missouri at Columbia marking Professor Lange's 70th birthday and his retirement from the university The principal purpose of the conference was to focus on continued fractions as a common interdisciplinary theme bridging gaps between a large number of fields from pure mathematics to mathematical physics and approximation theory Evident in this work is the widespread influence of continued fractions in a broad range of areas of mathematics and physics including number theory elliptic functions Padé approximations orthogonal polynomials moment problems frequency analysis and regularity properties of evolution equations Different areas of current research are represented The lectures at the conference and the contributions to this volume reflect the wide range of applicability of continued fractions in mathematics and the applied sciences

Perspectives in Analysis Michael Benedicks, Peter Jones, Stanislav Smirnov, 2006-06-01 The Conference Perspectives in Analysis was held during May 26-28 2003 at the Royal Institute of Technology in Stockholm Sweden The purpose of the conference was to consider the future of analysis along with its relations to other areas of mathematics and physics and to celebrate the seventy-fifth birthday of Lennart Carleson The scientific theme was one with which the name of Lennart Carleson has been associated for over fifty years His modus operandi has long been to carry out a twofold approach to the selection of research problems First one should look for promising new areas of analysis especially those having close contact with physically oriented problems of geometric character The second step is to select a core set of problems that require new techniques for their resolutions After making a central contribution Lennart would usually move on to a new area though he might return to the topic of his previous work if new techniques were developed that could break old mathematical logjams Lennart's operating approach is based on fundamental realities of modern mathematics as well as his own inner convictions Here we first refer to an empirical fact of mathematical research All topics have a finite half-life with fifteen years being an upper bound for most areas After that time it is usually a good idea to move on to something new
