Principles of Adaptive Filters and Self-learning Systems

Anthony Zaknich, 2005-08-19 The topics of control engineering and signal processing continue to flourish and develop. In common with general scientific investigation, new ideas, concepts, and interpretations emerge quite spontaneously and these are then discussed, used, discarded, or subsumed into the prevailing subject paradigm. Sometimes these innovative concepts coalesce into a new sub-discipline within the broad subject tapestry of control and signal processing. This preliminary battle between old and new usually takes place at conferences, through the Internet, and in the journals of the discipline. After a little more maturity has been acquired by the new concepts, then archival publication as a scientific or engineering monograph may occur. A new concept in control and signal processing is known to have arrived when sufficient material has evolved for the topic to be taught as a specialised tutorial, workshop, or as a course to undergraduate, graduate, or industrial engineers. Advanced Textbooks in Control and Signal Processing are designed as a vehicle for the systematic presentation of course material for both popular and innovative topics in the discipline. It is hoped that prospective authors will welcome the opportunity to publish a structured and systematic presentation of some of the newer emerging control and signal processing technologies in the textbook series.

Adaptive Filters Ali H. Sayed, 2011-10-11 Adaptive filtering is a topic of immense practical and theoretical value, having applications in areas ranging from digital and wireless communications to biomedical systems. This book enables readers to gain a gradual and solid introduction to the subject, its applications, to a variety of topical problems, existing limitations, and extensions of current theories. The book consists of eleven parts, each part containing a series of focused lectures and ending with bibliographic comments, problems, and computer projects with MATLAB solutions.

Fundamentals of Adaptive Filtering Ali H. Sayed, 2003-06-13 This book is based on a graduate-level course offered by the author at UCLA and has been class-tested there and at other universities over a number of years. This will be the most comprehensive book on the market today, providing instructors a wide choice in designing their courses. Offers computer problems to illustrate real-life applications for students and professionals alike. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department. Adaptive Filtering Paulo Sergio Ramirez Diniz, 2002 Adaptive Filtering: Algorithms and Practical Implementation, Second Edition presents a concise overview of adaptive filtering, covering as many algorithms as possible in a unified form that avoids repetition and simplifies notation. It is suitable as a textbook for senior undergraduate or first-year graduate courses in adaptive signal processing and adaptive filters. The philosophy of the presentation is to expose the material with a solid theoretical foundation, to concentrate on algorithms that really work in a finite-precision implementation, and to provide easy

access to working algorithms Hence practicing engineers and scientists will also find the book to be an excellent reference This second edition contains a substantial amount of new material Two new chapters on nonlinear and subband adaptive filtering Linearly constrained Weiner filters and LMS algorithms LMS algorithm behavior in fast adaptation Affine projection algorithms Derivation smoothing MATLAB codes for algorithms An instructor s manual a set of master transparencies and the MATLAB codes for all of the algorithms described in the text are also available Useful to both professional researchers and students the text includes 185 problems over 38 examples and over 130 illustrations It is of primary interest to those working in signal processing communications and circuits and systems It will also be of interest to those working in power systems networks learning systems and intelligent systems Adaptive Filter Theory Simon S. Haykin,1991 This book develops the mathematical theory of linear adaptive filters with finite impulse response Examples and computer experiment applications illustrate the theory and principles The second edition has also been restructured with an introduction followed by four parts discrete time wide sense station stochastic process linear optimum filtering linear FIR adaptive filtering limitations extensions and discussions on blind deconvolution new appendix material on complex variables and regulation
