The Codewriting Workbook Robert J. Krawczyk, 2009 A primer on basic code writing concepts for computer aided design in the fields of architecture and engineering. Provided by publisher. *Essential AutoLISP®* Roy Harkow, 2013-12-20 AutoCAD is the most widely used computer aided design package in the world. Underneath AutoCAD is a powerful computing language called AutoLISP. This language is designed to automate many functions of AutoCAD. This book is a hands on introduction to AutoLISP and its applications. AutoLISP is a unique and powerful language that allows you to write, debug, and modify programs extremely quickly once you understand how the language itself works. Part I contains an easy to learn pictorial representation for data and code, a tool used to easily solve problems otherwise approached through trial and error method. Essential AutoLISP is the only book in its field that uses the pictorial representation. Part II is devoted to learning how AutoLISP processes the code entered. Part V not only explains the causes of most common error messages and how to solve them but examines many other errors that don't necessarily give messages.

Control and Dynamic Systems V59: Computer-Aided Design/Engineering (Cad/Cae) Techniques And Their Applications Part 2 of 2 C.T. Leonides, 2012-12-02 Control and Dynamic Systems Volume 59 Computer Aided Design Engineering CAD CAE Techniques and Their Applications Part 2 of 2 is the second of a two volume sequence that manifests the significance and the power of CAD CAE techniques that are available and their further development for the essential role they play in the design of modern engineering systems. The volume contains 10 chapters and begins with an in depth treatment of the essential integration that must exist between design and manufacturing systems. This is followed by separate chapters on object oriented programming OOP and graphical user interface GUI technologies that support the CAD CAE design process in particular by means of the PC and the workstation and the role of a geometrically associative analysis modeler in the design optimization process. Subsequent chapters deal with finite analysis modeling for the integration of CAD CAE technology and finite element method, the mechanical analysis of two large structures: the world's largest telescope the 8m ESO VLT and a 3 D nuclear power plant heat exchanger and techniques for CAD for electromagnetic systems and components. The final chapters cover aircraft structural design techniques for determining the adequacy of the number of grids i.e. grid quality control in computational fluid dynamics CFD and techniques for the optimum design of control systems using system model variables and parameters. The contributions to this volume will provide a significant and perhaps unique reference source for students, research workers practicing
