Bifurcation Problems In Nonlinear Elasticity Research Notes In Mathematics:

Methods of Bifurcation Theory S.-N. Chow, J. K. Hale, 2012-12-06 An alternative title for this book would perhaps be Nonlinear Analysis Bifurcation Theory and Differential Equations Our primary objective is to discuss those aspects of bifurcation theory which are particularly meaningful to differential equations To accomplish this objective and to make the book accessible to a wider we have presented in detail much of the relevant background audience material from nonlinear functional analysis and the qualitative theory of differential equations Since there is no good reference for some of the material its inclusion seemed necessary Two distinct aspects of bifurcation theory are discussed static and dynamic Static bifurcation theory is concerned with the changes that occur in the structure of the set of zeros of a function as parameters in the function are varied If the function is a gradient then variational techniques play an important role and can be employed effectively even for global problems If the function is not a gradient or if more detailed information is desired the general theory is usually local At the same time the theory is constructive and valid when several independent parameters appear in the function In differential equations the equilibrium solutions are the zeros of the vector field Therefore methods in static bifurcation theory are directly applicable *Bifurcation Problems in Nonlinear Elasticity* Ronald Wayne Dickey, 1976

Mathematical Foundations of Elasticity Jerrold E. Marsden, Thomas J. R. Hughes, 2012-10-25 Graduate level study approaches mathematical foundations of three dimensional elasticity using modern differential geometry and functional analysis It presents a classical subject in a modern setting with examples of newer mathematical contributions 1983 edition

Some Bifurcation Topics in Non-linear Elastostatics Juan Carlos Simo-Muerza, 1982 **Bulletin of the American Mathematical Society**, 1978 **Local Bifurcation and Symmetry** A. Vanderbauwhede, 1982 *Nonlinear Functional Analysis and Its Applications, Part 2* Felix E. Browder, 1986 Nonlinear Elasticity R. W. Dickey, 2014-05-10 Nonlinear Elasticity presents a description of research and result on various nonlinear problems arising in elasticity This book covers a variety of topics including shallow elastic membranes nonlinear elasticity finite deformations of elastic solids and nonlinear thermoelasticity Organized into 11 chapters this book begins with an overview of the nonlinear theory of buckling of elastic shells This text then examines the ways in which the energy criterion supplies a necessary condition for asymptotic stability Other chapters consider some of the phenomena both physical and mathematical that typify the large deformation of a nonlinearly elastic body This book discusses as well the concepts leading to a criterion for instabilities and discusses how the criterion applies to some well known ideal materials The final chapter deals with the structure of strong shocks and studies the evolution of such a shock produced by a suddenly applied strain This book is a valuable resource for mathematicians

Bifurcation Phenomena in Mathematical Physics and Related Topics C. Bardos, D. Bessis, 2012-12-06 One of the main ideas in organizing the Summer Institute of Cargèse on Bifurcation Phenomena in Mathematical Physics and Related Topics was to bring together Physicists and Mathematicians working on the properties arising from the non linearity of the

phenomena and of the models that are used for their description Among these properties the existence of bifurcations is one of the most interesting and we had a general survey of the mathematical tools used in this field This survey was done by M Crandall and P Rabinowitz and the notes enclosed in these proceedings were written by E Buzano and C Canuto Another mathematical approach using Morse Theory was given by J Smoller reporting on a joint work with C Conley An example of a direct application was given by M Ghil For physicists the theory of bifurcation is closely related to critical phenomena and this was explained in a series of talks given by J P Eckmann G Baker and M Fisher Some related ideas can be found in the talk given by T T Wu on a joint work with Barry Mc Coy on quantum field theory The description of these phenomena leads to the use of Padé approximants it is explained for instance in the lectures of J Nuttall and then to some problems in drop hot moment problems of the lecture of D Bessis Mechanics of Solids H. G. Hopkins, M. J. Sewell, 2016-05-24 An important collection of review papers by internationally recognized experts on the broad area of the mechanics of solids
