Rita Jordan, Stuart Powell

Autism From Theoretical Understanding To Educational Intervention Exc Business And Economy Whurr:

Autism Theo Peeters, 1997-09-16 Autism is a condition which renders the sufferer incapable of understanding meaning beyond the information given. The autistic person has a purely literal relationship with reality and has difficulty in developing imagination. Theo Peeters regards autistic people as hyperrealist in a world of surrealism that we call normal. Paradoxically it is lack of imagination that makes dealing with an absence of imagination so difficult. This book not only provides a theoretical understanding of the condition to help carers to adapt to the autistic person's way of thinking but also offers practical intervention strategies for education and treatment.

Understanding and Teaching Children with Autism Rita Jordan, Stuart Powell, 1995-08-29 Autism is a lifelong condition that requires special care and consideration right into adulthood and has an impact on many lives. This book is aimed at those concerned with the education and welfare of children with autism, particularly at teachers in Special Education and the psychologists and care professionals who work with teachers and parents of children with autism. Although there is no miracle cure for autism, this book brings a message of hope that early intervention is advantageous and that by a better understanding of autism and the different ways it is experienced by individual children, more effective ways can be found to meet educational needs and improve quality of life. Understanding the development processes and problems of children with autism and the implications of these problems for social and educational learning is the purpose of this book. The authors provide an accessible account of psychological concepts and research in social and emotional development, communication, cognition and behaviour as related to individuals with autism. The fundamental problems of autism, relationships, communication and flexibility of thought and behaviour are addressed and practical guidance is offered on how these might be overcome or circumvented in both home and school. This book specifically addresses the needs of children but much of it will remain relevant to those working with adults who will appreciate the book's exploration of the roles played by emotion and cognition in the autistic condition and the way in which these affect teaching and learning.
