

ASSETS

Assets are resources owned by a business that have economic value. They are the result of investments made by the business or its owners. Assets are recorded on the balance sheet and are classified into current assets and non-current assets.

- **Current Assets:** These are assets that are expected to be converted into cash or used up within one year. Examples include cash, accounts receivable, inventory, and prepaid expenses.
- **Non-current Assets:** These are assets that are not expected to be converted into cash or used up within one year. Examples include property, plant, and equipment, and intangible assets like patents and trademarks.

The accounting equation states that **Assets = Liabilities + Equity**. This means that the total value of a company's assets must always equal the sum of its liabilities and equity.

LIABILITIES

Liabilities are obligations or debts that a business owes to other parties. They are recorded on the balance sheet and are classified into current liabilities and non-current liabilities.

- **Current Liabilities:** These are liabilities that are due within one year. Examples include accounts payable, short-term debt, and accrued expenses.
- **Non-current Liabilities:** These are liabilities that are due after more than one year. Examples include long-term debt, deferred tax liabilities, and pension liabilities.

The accounting equation states that **Assets = Liabilities + Equity**. This means that the total value of a company's assets must always equal the sum of its liabilities and equity.

$$\text{ASSETS} = \text{LIABILITIES} + \text{EQUITY}$$
