Geopolymers in South America and Easter Island Joseph Davidovits, 2024-11-16 This book presents the study on Ancient Geopolymers in South America and Easter Island regions exploring the artificial nature of the volcanic rocks used in the construction of Easter Island's statues. Contrary to the belief that the statues were carved and transported, Davidovits suggests they were made on site using geopolymer technology. He proposes that this knowledge came from Amerindians from the Andes, specifically the Tiahuanaco region near Lake Titicaca. The book is divided into two parts: the first examines geopolymeric artificial stone technologies in the Andes, and the second establishes a connection between these technologies and Easter Island, 3,700 km away. Davidovits' research includes geological expeditions, SEM analysis, petrography, and a comprehensive review of international literature. It is intriguing to observe that in both cases, Pumapunku/Tiwanku in the Andes and Easter Island volcanic rocks are involved, which contain biological carbon. These discoveries undeniably support the theory of geopolymeric artificial manufacturing, challenging traditional archaeological views. **The Routledge**

International Handbook of Island Studies Godfrey Baldacchino, 2018-06-13 From tourist paradises to immigrant detention camps, from offshore finance centres to strategic military bases, islands offer distinct identities and spaces in an increasingly homogenous and placeless world. The study of islands is important for its own sake and on its own terms. But so is the notion that the island is a laboratory, a place for developing and testing ideas and from which lessons can be learned and applied elsewhere. The Routledge International Handbook of Island Studies is a global research-based and pluridisciplinary overview of the study of islands. Its chapters deal with the contribution of islands to literature, social science, and natural science, as well as other applied areas of inquiry. The collated expertise of interdisciplinary and international scholars offers unique insights. Individual chapters dwell on geomorphology, zoology, and evolutionary biology, the history, sociology, economics, and politics of island communities, tourism, wellbeing, and migration, as well as island branding, resilience, and commoning. The text also offers pioneering forays into the study of islands that are cities along rivers or artificial constructions. This insightful Handbook will appeal to geographers, environmentalists, sociologists, political scientists, and one hopes some of the 600 million or so people who live on islands or are interested in the rich dynamics of islands and island life.
