Biometrical Genetics Analysis Of Quantitative Variation:

Biometrical Genetics Darbeshwar Roy, 2012

Biometrical Genetics Darbeshwar Roy, 2012 BIOMETRICAL GENETICS Analysis of Quantitative Variation describes the genetic analyses for working out the genetic architecture of quantitative traits. The book provides brief description of both univariate and multivariate statistics. The genetic analyses include study of basic generations and the use of multiple mating designs such as BIPs, NC1, NC2, Diallel, NC3 and TTC. Variation arising due to linkage, epistasis, environment, maternal effect and sex linkage are also described. Models of G x E interaction and competition and biometrical genetics of polyploids and haploid are discussed in detail. Biometrical genetics of heterosis and inbreeding depression and the method for calculation of inbreeding coefficient are given. Methods for estimation of heritability and number of effective factors are completely described. H-W equilibrium and the evolutionary forces are described in detail. Selection theory including path coefficient analysis is fully described. QTL analysis and models for estimating genetic parameters are also fully described. This book also includes a chapter on matrix and biometrical problems which will help in carrying out practical in this course. This book will be helpful to undergraduate and post graduate students as well as teachers and researchers in the field of quantitative genetics and practical plant breeding.

Principles and Procedures of Plant Breeding G. S. Chahal, S. S. Gosal, 2002. Covering traditional and emerging breeding procedures, this book explores the scientific bases and details of breeding plants. It puts a special emphasis on the further refinements possible in the light of the latest developments in molecular biology. Specific breeding methods in self and cross-pollinated crops, their genetic basis and scope of further refinements, concepts and techniques of tissue culture, molecular biology and production of transgenic plants, commonly used experimental designs in plant breeding, seed production and implications of plant breeder's rights are other highlights.

Quantitative genetic variation James N. Jr. Thompson, 2012-12-02. Quantitative Genetic Variation describes some of the experimental approaches to quantitative genetic variation along with their potential applications and limitations. It considers one of the most widely applicable tools, i.e. biometrical analysis, as well as individual polygenic effects, specific components of a quantitative genetic trait and artificial selection, and it shows how selection experiments can address specific developmental and genetic questions. Organized into four sections encompassing 17 chapters, this volume begins with a historical overview of the study of quantitative genetic variation along with genetic variation in fungi and *Drosophila*. It then discusses the biometrical approach to quantitative variation, selection theory and analysis, uses and limitations of polygene mapping and computer simulation of the breeding program for polygene location. The reader is also introduced to genes affecting quantitative aspects of physiology in rodents as well as cytological markers and quantitative variation in wheat. This book will be extremely useful to students, researchers and geneticists.

Recombination Variability and Evolution A.B. Korol, S.I. Preigel, 1994-08-31. Using an interdisciplinary approach, the authors provide an adaptationist interpretation of the basic features of recombination, its evolutionary significance as a key

process in reproduction and its importance in genetic mapping The book synthesizes much recent information in the fields of evolutionary genetics of recombination the analysis of genetic markers and breeding applications The authors analyse recombination through a consideration of computer models large Drosophila populations and an empirical approach to current theories Practically orientated readers will be interested in the discussion of a wide spectrum of mapping methods and the new algorithms proposed for genetic mapping of quantitative loci

Temperate Crop Science and Breeding Sarra Abramovna Bekuzarova,Nina Anatolievna Bome,Anatoly Ivanovich Opalko,Larissa I. Weisfeld,2016-03-30 This new collection covers a wide variety of research on the ecological aspects of crops growing under stress conditions due to atmospheric changes and pollution and the impact on both plant and human health The book provides research that will help to find ways to overcome adverse abiotic environmental factors and unfavorable anthropogenic pressure
