Basic Biotechnology Colin Ratledge, Bjorn Kristiansen, 2006-05-25 Biotechnology is one of the major technologies of the twenty first century Its wide ranging multi disciplinary activities include recombinant DNA techniques cloning and the application of microbiology to the production of goods from bread to antibiotics In this new edition of the textbook Basic Biotechnology biology and bioprocessing topics are uniquely combined to provide a complete overview of biotechnology The fundamental principles that underpin all biotechnology are explained and a full range of examples are discussed to show how these principles are applied from starting substrate to final product A distinctive feature of this text are the discussions of the public perception of biotechnology and the business of biotechnology which set the science in a broader context This comprehensive textbook is essential reading for all students of biotechnology and applied microbiology and for researchers in biotechnology industries

Bioreactor Design Fundamentals Norton G. McDuffie, 2013-10-22 Bioreactor Design Fundamentals presents the development in the bioreactor field This book discusses the applications of biological kinetics and thermodynamics Organized into seven chapters this book begins with an overview of the design of biological reactors that involves determining operating conditions sizing the reactor controlling temperature and sterility and controlling operating variables This text then examines the significance of pH considerations in biological reactor and process design Other chapters consider enzyme kinetics and the equations most commonly used as models for overall enzyme kinetics This book discusses as well the mass transfer rates in bioreactors which are significant because of their effects on some chemical reaction rates in transformations by enzymes or by living cells The final chapter deals with the ideal state of the continuous stirred tank reactors CSTRs This book is a valuable resource for biochemical engineers and industrial microbiologists

Bioreactor Design Concepts for Viral Vaccine Production Surajbhan Sevda, Sachin Kumar, 2024-05-12 Bioreactor Design Concepts for Viral Vaccine Production covers a range of interdisciplinary chapters from the engineering perspective of bioreactor design to the biotechnological perspectives of vector design for vaccine development The book covers bioreactor concepts such as static systems single use systems stirred tanks perfusion wave and packed beds It reviews options for efficient and economical production of human vaccines and discusses basic factors relevant for viral antigen production in mammalian cells avian cells and insect cells This book will be a great resource for

those interested in implemented novel bioreactor design or experimental schemes towards intensified or and enhanced vaccine production Covers the fundamentals of bioreactor designs Provides strategies for designing a successful vector based vaccine Discusses the applications of biological kinetics thermodynamics and basic substrate requirements for viral vaccine production Solid-State Fermentation Bioreactors David A. Mitchell,Nadia Krieger,Marin Berovic,2006-08-02 This concise professional reference provides a fundamental framework for the design and operation of solid state fermentation bioreactors enabling researchers currently working at laboratory scale to scale up their processes The authors survey bioreactor types in common use and describe in depth how to plan a project and model heat transfer phenomena The book includes case studies and a review of practical issues involved in bioreactor performance **Bioreactors Analysis and Design** Mr. Rohit Manglik,2024-07-12 EduGorilla Publication is a trusted name in the education sector committed to empowering learners with high quality study materials and resources Specializing in competitive exams and academic support EduGorilla provides comprehensive and well structured content tailored to meet the needs of students across various streams and levels **An Introduction to Bioreactor Hydrodynamics and Gas-Liquid Mass Transfer** Enes Kadic,Theodore J. Heindel,2014-03-14 Reviews and compares the major types of bioreactors defines their pros and cons and identifies research needs and figures of merit that have yet to be addressed Describes common modes of operation in bioreactors Covers the three common bioreactor types including stirred tank bioreactors bubble column bioreactors and airlift bioreactors Details less common bioreactors types including fixed bed bioreactors and novel bioreactor designs Discusses advantages and disadvantages of each bioreactor and provides a procedure for optimal bioreactor selection based on current process needs Reviews the problems of bioreactor selection globally while considering all bioreactor options rather than concentrating on one specific bioreactor type *Basic Engineering for Medics and Biologists* T. Clive Lee,Peter Niederer,2010 Developments in bioengineering and medical technology have led to spectacular progress in clinical medicine As a result increased numbers of courses are available in the area of bioengineering and clinical technology These often include modules dealing with basic biological and medical sciences aimed at those taking up these studies who have a background in engineering To date relatively few participants from medicine have taken up courses in biomedical engineering to the detriment of scientific exchange between engineers and medics The European Society for Engineering and Medicine ESEM aims to bridge the gap between engineering and medicine and biology It promotes cultural and scientific exchanges between the engineering and the medical biological fields This primer consists of a series of First Step chapters in engineering and is principally presented for those with a medical or biology background who intend to start a MSc programme in biomedical engineering and for medics or biologists who wish to better understand a particular technology It will also serve as a reference for biomedical engineers Written by engineers and medics who are leaders in their field it covers the basic engineering principles underpinning biomechanics bioelectronics medical informatics biomaterials tissue engineering bioimaging and rehabilitation
