

String Processing Example

❖ Replace all occurrences of *key* with *sub*

```
String replace(String in, String key, String sub){
    String out = "";
    int keyLen = key.length();
    int pos = in.indexOf(key);
    while (pos >= 0) {
        out += in.substring(0, pos); // copy prefix to out
        String mod = sub; // "modify" key
        in = in.substring(pos+keyLen); // Strip prefix + key
        out += mod; // add "modified key" to out
        pos = in.indexOf(key); // set up for repeat (if any)
    }
    out += in;
    return out;
}

Over the last 20 years approaches to designing speech and language processing algorithms have moved from methods based on linguistics and speech science to data driven pattern recognition techniques These techniques have been the focus of intense fast moving research and have contributed to significant advances in this field Pattern Reco *Natural Language Processing and Information Systems* Rafael Munoz,Andres Montoyo,Elisabeth Metais,2011-06-22 This book constitutes the refereed proceedings of the 16th International Conference on Applications of Natural Language to Information Systems held in Alicante Spain in June 2011 The 11 revised full papers and 11 revised short papers presented together with 23 poster papers 1 invited talk and 6 papers of the NLDB 2011 doctoral symposium were carefully reviewed and selected from 74 submissions The papers address all aspects of Natural Language Processing related areas and present current research on topics such as natural language in conceptual modeling NL interfaces for data base querying retrieval NL based integration of systems large scale online linguistic resources applications of computational linguistics in information systems management of textual databases NL on data warehouses and data mining NLP applications as well as NL and ubiquitous computing Language Processing in Bilinguals Jyotsna Vaid,2014-01-10 For decades bilingualism has resisted definition If bilingualism is defined as habitual fluent correct and accent free use of two languages few individuals would qualify as bilinguals A more viable approach may be to concede that bilingual can be seen instead as a range of points on a continuum that allows for differences The psychological study of bilingualism encompasses a wide range of phenomena including the organization and representation of the grammar the perception and production of language mixing cerebral lateralization of language functions and patterns of recovery of aphasic patients This book collects together an international array of researchers in experimental psychology linguistics and neuropsychology who bring their expertise to bear on the critical issues that are raised by the bilingual phenomena *Semantics-Oriented Natural Language Processing* Vladimir Fomichov A.,2009-12-01 Gluecklich die wissen dass hinter allen Sprachen das Unsaegliche steht Those are happy who know that behind all languages there is something unsaid Rainer Maria Rilke This book shows in a new way that a solution to a fundamental problem from one scienti c eld can help to nd the solutions to important problems emerged in several other elds of science and technology In modern science the term Natural Language denotes the collection of all such languages that every language is used as a primary means of communication by people belonging to any country or any region So Natural Language NL includes in particular the English Russian and German languages The applied computer systems processing natural language printed or written texts NL texts or oral speech with respect to the fact that the words are associated with some meanings are called semantics oriented natural language processing s tems NLPs On one hand this book is a snapshot

of the current stage of a research program started many years ago and called Integral Formal Semantics IFS of NL. The goal of this program has been to develop the formal models and methods helping to overcome the difficulties of logical character associated with the engineering of semantics oriented NLPs. The designers of such systems of arbitrary kinds will find in this book the formal means and algorithms being of great help in their work.

Handbook of Natural Language Processing and Machine Translation Joseph Olive, Caitlin Christianson, John McCary, 2011-03-02 This comprehensive handbook written by leading experts in the field details the groundbreaking research conducted under the breakthrough GALE program. The Global Autonomous Language Exploitation within the Defense Advanced Research Projects Agency DARPA while placing it in the context of previous research in the fields of natural language and signal processing, artificial intelligence and machine translation. The most fundamental contrast between GALE and its predecessor programs was its holistic integration of previously separate or sequential processes. In earlier language research programs each of the individual processes was performed separately and sequentially: speech recognition, language recognition, transcription, translation and content summarization. The GALE program employed a distinctly new approach by executing these processes simultaneously. Speech and language recognition algorithms now aid translation and transcription processes and vice versa. This combination of previously distinct processes has produced significant research and performance breakthroughs and has fundamentally changed the natural language processing and machine translation fields. This comprehensive handbook provides an exhaustive exploration into these latest technologies in natural language, speech and signal processing and machine translation, providing researchers, practitioners and students with an authoritative reference on the topic.

ANNA A Language for Annotating Ada Programs David C. Luckham, 1987-07-15 This reference manual of ANNA is another volume addressed to the ADA community. ANNA is a language extension of ADA to include facilities for formally specifying the intended behavior of ADA programs. It is designed to meet a perceived need to augment ADA with precise machine processable annotations so that well established formal methods of specification and documentation can be applied to ADA programs. The current ANNA design includes annotations of all ADA constructs except tasking. Similar extensions for formal specification can be made to other Algol-like languages such as Pascal, PL 1, Concurrent Pascal and Modula. Essentially these extensions would be subsets of ANNA. The design of ANNA was undertaken from the beginning with four principal considerations:

1. Constructing annotations should be easy for the ADA programmer and should depend as much as possible on notation and concepts of ADA.
2. ANNA should possess language features that are widely used in the specification and documentation of programs.
3. ANNA should provide a framework within which the various established theories of formally specifying programs may be applied to ADA.
4. Annotations should be equally well suited for different possible applications during the life cycle of a program. Such applications include not only testing, debugging and formal verification of a finished program but also specification of program parts during the earlier stages of requirements analysis and program design.
