Computing systems including hardware software communication and networks are becoming increasingly large and heterogeneous. In short they have become increasingly complex. Such complexity is getting even more critical with the ubiquitous permeation of embedded devices and other pervasive systems. To cope with the growing and ubiquitous complexity, autonomic computing (AC) focuses on self-manageable computing and communication systems that exhibit self-awareness, self-configuration, self-optimization, self-healing, self-protection, and other self-properties to the maximum extent possible without human intervention or guidance. Organic computing (OC) additionally addresses adaptability, robustness, and controlled emergence, as well as nature-inspired concepts for self-organization. Any autonomic or organic system must be trustworthy to avoid the risk of losing control and retain confidence that the system will not fail. Trust and/or distrust relationships in the Internet and in pervasive infrastructures are key factors to enable dynamic interaction and cooperation of various users, systems, and services. Trusted trustworthy computing (TC) aims at making computing and communication systems, as well as services, available, predictable, traceable, controllable, assessable, sustainable, dependable, persistent, secure, privacy-protectable, etc. A series of grand challenges exists to achieve practical autonomic or organic systems with truly trustworthy services. Started in 2005, ATC conferences have been held at Nagasaki, Japan; Vienna, Austria; Three Gorges, China; Hong Kong, China; Oslo, Norway; and Brisbane, Australia. The 2010 proceedings contain the papers presented at the 7th International Conference on Autonomic and Trusted Computing (ATC 2010) held in Xi'an, China, October 26-29, 2010.

Autonomic and Trusted Computing Chunming Rong, Martin Gilje Jaatun, Frode Eika Sandnes, Laurence Tianruo Yang, 2008-06-11
This book constitutes the refereed proceedings of the 5th International Conference on Autonomic and Trusted Computing (ATC 2008) held in Oslo, Norway, in June 2008, co-located with UIC 2008, the 5th International Conference on Ubiquitous Intelligence and Computing. The 25 revised full papers presented together with 26 special session papers and 1 keynote talk were carefully reviewed and selected from 75 submissions. The regular papers are organized in topical sections on intrusion detection, trust, trusted systems, and crypto; autonomic computing; organic computing; knowledge and patterns; and pervasive systems. The special session papers cover issues such as organic computing; trust; trust and dependable systems; routing and reliable systems; sensor networks; VoIP and watermarking.

Autonomic and Trusted Computing Bin Xiao, Laurence T. Yang, Christian Muller-Schloer, Yu Hua, 2007-08-13
No fewer than 55 revised full papers are presented in this volume, all given at the 4th International Conference on Autonomic and Trusted Computing held in Hong Kong, China, in July 2007. The papers presented together with one keynote lecture were carefully reviewed and selected from 223 submissions. The papers are organized in topical sections on, among others, cryptography and signatures; autonomic computing and services; and secure and trusted computing.

Trusted Computing Environments Wagner, Paul Georg, 2025-01-17 Distributed usage control allows to regulate the use of data even after sharing However existing solutions are susceptible to manipulation by dishonest data receivers This work investigates the use of trusted computing to achieve a trustworthy usage control enforcement process For this a suitable system architecture and several remote attestation protocols are designed and implemented The resulting usage control framework is evaluated using a smart manufacturing application scenario
