Incorporating Genomics and Bioinformatics Across the Life Sciences Curriculum, 2011 Undergraduate life sciences education needs an overhaul as clearly described in the National Research Council of the National Academies publication BIO 2010 Transforming Undergraduate Education for Future Research Biologists Among BIO 2010's top recommendations is the need to involve students in working with real data and tools that reflect the nature of life sciences research in the 21st century Education research studies support the importance of utilizing primary literature designing and implementing experiments and analyzing results in the context of a bona fide scientific question in cultivating the analytical skills necessary to become a scientist Incorporating these basic scientific methodologies in undergraduate education leads to increased undergraduate and post graduate retention in the sciences Toward this end many undergraduate teaching organizations offer training and suggestions for faculty to update and improve their teaching approaches to help students learn as scientists through design and discovery e g Council of Undergraduate Research www.cur.org and Project Kaleidoscope www.pkall.org With the advent of genome sequencing and bioinformatics many scientists now formulate biological questions and interpret research results in the context of genomic information Just as the use of bioinformatic tools and databases changed the way scientists investigate problems it must change how scientists teach to create new opportunities for students to gain experiences reflecting the influence of genomics proteomics and bioinformatics on modern life sciences research Educators have responded by incorporating bioinformatics into diverse life science curricula While these published exercises in and guidelines for bioinformatics curricula are helpful and inspirational faculty new to the area of bioinformatics inevitably need training in the theoretical underpinnings of the algorithms Moreover effectively integrating bioinformatics into courses or independent research projects requires infrastructure for organizing and assessing student

work Here we present a new platform for faculty to keep current with the rapidly changing field of bioinformatics the Integrated Microbial Genomes Annotation Collaboration Toolkit IMG ACT It was developed by instructors from both research intensive and predominately undergraduate institutions in collaboration with the Department of Energy Joint Genome Institute DOE JGI as a means to innovate and update undergraduate education and faculty development The IMG ACT program provides a cadre of tools including access to a clearinghouse of genome sequences bioinformatics databases data storage instructor course management and student notebooks for organizing the results of their bioinformatic investigations In the process IMG ACT makes it feasible to provide undergraduate research opportunities to a greater number and diversity of students in contrast to the traditional mentor to student apprenticeship model for undergraduate research which can be too expensive and time consuming to provide for every undergraduate The IMG ACT serves as the hub for the network of faculty and students that use the system for microbial genome analysis Open access of the IMG ACT infrastructure to participating schools ensures that all types of higher education institutions can utilize it With the infrastructure in place faculty can focus their efforts on the pedagogy of bioinformatics involvement of students in research and use of this tool for their own research agenda What the original faculty members of the IMG ACT development team present here is an overview of how the IMG ACT program has affected our development in terms of teaching and research with the hopes that it will inspire more faculty to get involved
