Bioinformatics Christine Orengo, David Jones, Janet Thornton, 2003-12-16 Bioinformatics the use of computers to address biological questions has become an essential tool in biological research It is one of the critical keys needed to unlock the information encoded in the flood of data generated by genome protein structure transcriptome and proteome research Bioinformatics Genes Proteins Computers covers both the more traditional approaches to bioinformatics including gene and protein sequence analysis and structure prediction and more recent technologies such as datamining of transcriptomic and proteomic data to provide insights on cellular mechanisms and the causes of disease **Bioinformatics** Christine

Orengo, David T. Jones, Janet M. Thornton, 2003-01 This title describes the development and use of computational and mathematical methods for the acquisition archiving analysis and interpretation of biological detail It details traditional approaches as well as recent technological advances **Molecular Toxicology** Nick Plant, 2003 Molecular Toxicology is a

concise introduction to the subject taking the reader through the theoretical principles of toxicology followed by specific examples In the first section the concepts behind possible mechanisms of toxicity are described e g the specific enzyme or receptor system using examples where appropriate Following this a series of examples are used to show the extension of concept into the real world in an organ specific manner The book concludes with a section outlining toxicity assessment methods where the impact of molecular biology is having a considerable impact including DNA microarrays proteomics and bioinformatics

This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools. Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1: Background Resources and Tools, arranged in 5 parts, begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject, such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations, constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2: The Global Arena, offers contributed chapters focusing on the toxicology contributions of over 40 countries, followed by a glossary of toxicological terms and an appendix of popular quotations related to the field. The book, offered in both print and electronic formats, is carefully structured, indexed, and cross-referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed. Among the many timely topics receiving increased emphasis are disaster preparedness, nanotechnology, omics, risk assessment, societal implications such as ethics and the precautionary principle, climate change, and children's environmental health. Introductory chapters provide a backdrop to the science of toxicology, its history, the origin and status of toxicoinformatics, and starting points for identifying resources. Offers an extensive array of chapters organized by subject, each highlighting resources such as journals, databases, organizations, and review articles. Includes chapters with an emphasis on format, such as government reports, general interest publications, blogs, and audiovisuals. Explores recent internet trends, web-based databases, and software tools in a section on the online environment. Concludes with a miscellany of special topics such as laws and regulations, chemical hazard, communication resources, careers, and professional education. K-12 resources, funding, poison control centers, and patents. Paired with Volume Two, which focuses on global resources, this set offers the most comprehensive compendium of print, digital, and organizational resources in the toxicological sciences, with over 120 chapters, contributions by experts and leaders in the field.
