Biological Experimentation Its Function Limits:

Biology of Copepods Geoffrey Boxshall, H.K. Schminke, 2012-12-06 This volume contains the Proceedings of the Third International Conference on Copepoda held at the British Museum Natural History in London during August 1987. The central theme of the conference was the biology of marine planktonic copepods, although the scientific programme was extremely varied, reflecting the wide range of life styles adopted by copepods. The three invited symposia held during the conference focussed attention on particular topical areas of research within the field of marine plankton and also provided reviews of chosen aspects of copepod biology. These symposia were highly successful. The papers they contained were both informative and stimulating and they bring to this volume a lasting significance. Each symposium was organised by its chairman. Bruce Frost, University of Washington, decided on the balance of topics, selected the speakers and introduced the session on 'The biology and taxonomy of Calanus'. Roger Harris, Marine Biological Association, performed the same vital role for 'Experimental studies of rate processes in field populations of planktonic copepods'. Howard Roe, Institute of Oceanographic Sciences, for 'Oceanic and deep sea copepods'. The impact of these papers will be much enhanced by the large number of high quality contributed and poster papers on marine plankton and by the invited review of 'Copepod luminescence' by Peter Herring, Institute of Oceanographic Sciences. The fascinating review of 'Copepod eyes' by Mike Land, FRS, University of Sussex, is not published here.

Scientific and Medical Knowledge Production, 1796-1918 Rob Boddice, 2023-05-31 This volume showcases doubt from within the scientific community itself. These sources dwell upon the moments at which ideas became challenged when facts were revealed to be fiction and when knowns reverted to unknowns. But the focus is not the ideas and facts themselves but on the ways in which scientists adjusted themselves to new landscapes of uncertainty in their particular cultural and professional practices.

A History of the Development of Alternatives to Animals in Research and Testing John Parascandola, 2024-07-15 Growing public interest in animal welfare issues in recent decades has prompted increased attention to the efforts to develop alternative nonanimal methods for use in biomedical research and product testing. In *A History of the Development of Alternatives to Animals in Research and Testing*, the first book-length study of the subject, John Parascandola traces the history of the concept of alternatives to the use of animals in research and testing in Britain and the United States from its beginnings until it had become firmly established in the scientific and animal protection communities by the end of the 1980s. This account of the history of alternatives is set within the context of developments within science, animal welfare and politics. The book covers the key role played by animal welfare advocates in promoting alternatives, the initial resistance to alternatives on the part of many in the scientific community, the opportunity provided by alternatives for compromise and cooperation between these two groups and the dominance of the Three Rs: reduction, refinement and replacement.
