Biological and Medical Data Analysis Nicos Maglaveras, Ioanna Chouvarda, Vassilis Koutkias, Rüdiger Brause, 2006-11-23 This book constitutes the refereed proceedings of the 7th International Symposium on Biological and Medical Data Analysis ISBMDA 2006 held in Thessaloniki Greece December 2006 Coverage in this volume includes functional genomics sequence analysis biomedical models information modeling biomedical signal processing biomedical image analysis biomedical data analysis as well as decision support systems and diagnostic tools Biological and Medical Data Analysis José María Barreiro, Fernando Martin-Sanchez, Víctor Maojo, Ferran Sanz, 2004-12-21 This year the 5th International Symposium on Medical Data Analysis has experimented an apparently slight modification The word biological has been added to the title of the conferences The motivation for this shift goes beyond the wish to attract a different kind of professional It is linked to recent trends to produce a shift within various biomedical areas towards genomics based research and practice For instance medical informatics and bioinformatics are being linked in a synergic area denominated biomedical informatics Similarly patient care is being improved leading to concepts and areas such as molecular medicine genomic medicine or personalized healthcare The results from different genome projects the advances in systems biology and the integrative approaches to physiology would not be possible without new approaches in data and information processing Within this scenario novel methodologies and tools will be needed to link clinical and genomic information for instance for genetic clinical trials integrated data mining of genetic clinical records and clinical databases or gene expression studies among others Genomic medicine presents a series of challenges that need to be addressed by researchers and practitioners In this sense this ISBMDA conference aimed to become a place where researchers involved in biomedical research could meet and discuss For this conference the classical contents of former ISMDA conferences were updated to incorporate various issues from the biological fields Similarly to the incorporation of these new topics of the conference data analysts will face in this world of genomic medicine and related areas significant challenges in research education and practice

Biological and Medical Data Analysis José Luis Oliveira, Víctor Maojo, Fernando Martin-Sanchez, António Sousa Pereira, 2005-10-24 **Medical Data Analysis** Rüdiger W. Brause, Ernst Hanisch, 2003-07-31 It is a pleasure for us to present the contributions of the First International Symposium on Medical Data Analysis Traditionally the field of medical data analysis can be divided into classical topics such as medical statistics survival analysis biometrics and medical informatics Recently however time series analysis by physicists machine learning and data mining with methods such as neural networks Bayes networks or fuzzy computing by computer scientists have contributed important ideas to the field of medical data analysis Although all these groups have similar intentions there was nearly no exchange or discussion between them With the growing possibilities for storing and analyzing patient data even in smaller health care institutions the need for a rational treatment of all these data emerged as well Therefore the need for data exchange and presentation systems grew also The

goal of the symposium is to collect all these relevant aspects together. It provides an international forum for the sharing and exchange of original research results, ideas and practical experiences among researchers and application developers from different areas related to medical applications dealing with the analysis of medical data. After a thorough reviewing process, 33 high quality papers were selected from the 45 international submissions. These contributions provided the different aspects of the field in order to represent us with an exciting program.
